About this Manual

The Manual includes instructions for using and managing the Product. Pictures, charts, images and all other information hereinafter are for description and explanation only. The information contained in the Manual is subject to change, without notice, due to firmware updates or other reasons. Please find the latest version of this Manual at the Hikvision website (<https://www.hikvision.com/>).

Please use this Manual with the guidance and assistance of professionals trained in supporting the Product.

Trademarks

HIKVISION and other Hikvision's trademarks and logos are the properties of Hikvision in various jurisdictions. Other trademarks and logos mentioned are the properties of their respective owners.

Disclaimer

TO THE MAXIMUM EXTENT PERMITTED BY APPLICABLE LAW, THIS MANUAL AND THE PRODUCT DESCRIBED, WITH ITS HARDWARE, SOFTWARE AND FIRMWARE, ARE PROVIDED "AS IS" AND "WITH ALL FAULTS AND ERRORS". HIKVISION MAKES NO WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY, SATISFACTORY QUALITY, OR FITNESS FOR A PARTICULAR PURPOSE. THE USE OF THE PRODUCT BY YOU IS AT YOUR OWN RISK. IN NO EVENT WILL HIKVISION BE LIABLE TO YOU FOR ANY SPECIAL, CONSEQUENTIAL, INCIDENTAL, OR INDIRECT DAMAGES, INCLUDING, AMONG OTHERS, DAMAGES FOR LOSS OF BUSINESS PROFITS, BUSINESS INTERRUPTION, OR LOSS OF DATA, CORRUPTION OF SYSTEMS, OR LOSS OF DOCUMENTATION, WHETHER BASED ON BREACH OF CONTRACT, TORT (INCLUDING NEGLIGENCE), PRODUCT LIABILITY, OR OTHERWISE, IN CONNECTION WITH THE USE OF THE PRODUCT, EVEN IF HIKVISION HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR LOSS.

YOU ACKNOWLEDGE THAT THE NATURE OF THE INTERNET PROVIDES FOR INHERENT SECURITY RISKS, AND HIKVISION SHALL NOT TAKE ANY RESPONSIBILITIES FOR ABNORMAL OPERATION, PRIVACY LEAKAGE OR OTHER DAMAGES RESULTING FROM CYBER-ATTACK, HACKER ATTACK, VIRUS INFECTION, OR OTHER INTERNET SECURITY RISKS; HOWEVER, HIKVISION WILL PROVIDE TIMELY TECHNICAL SUPPORT IF REQUIRED.

YOU AGREE TO USE THIS PRODUCT IN COMPLIANCE WITH ALL APPLICABLE LAWS, AND YOU ARE SOLELY RESPONSIBLE FOR ENSURING THAT YOUR USE CONFORMS TO THE APPLICABLE LAW. ESPECIALLY, YOU ARE RESPONSIBLE, FOR USING THIS PRODUCT IN A MANNER THAT DOES NOT INFRINGE ON THE RIGHTS OF THIRD PARTIES, INCLUDING WITHOUT LIMITATION, RIGHTS OF PUBLICITY, INTELLECTUAL PROPERTY RIGHTS, OR DATA PROTECTION AND OTHER PRIVACY RIGHTS. YOU SHALL NOT USE THIS PRODUCT FOR ANY PROHIBITED END-USES, INCLUDING THE DEVELOPMENT OR PRODUCTION OF WEAPONS OF MASS DESTRUCTION, THE DEVELOPMENT OR PRODUCTION OF CHEMICAL OR BIOLOGICAL WEAPONS, ANY ACTIVITIES IN THE CONTEXT RELATED TO ANY NUCLEAR EXPLOSIVE OR UNSAFE NUCLEAR FUEL-CYCLE, OR IN SUPPORT OF HUMAN RIGHTS ABUSES.

IN THE EVENT OF ANY CONFLICTS BETWEEN THIS MANUAL AND THE APPLICABLE LAW, THE LATTER PREVAILS.

Regulatory Information

EU Conformity Statement

 This product and - if applicable - the supplied accessories too are marked with "CE" and comply therefore with the applicable harmonized European standards listed under the RE Directive 2014/53/EU, EMC Directive 2014/30/EU, the LVD Directive 2014/35/EU, the RoHS Directive 2011/65/EU.

 2012/19/EU (WEEE directive): Products marked with this symbol cannot be disposed of as unsorted municipal waste in the European Union. For proper recycling, return this product to your local supplier upon the purchase of equivalent new equipment, or dispose of it at designated collection points. For more information see: www.recyclethis.info

 2006/66/EC (battery directive): This product contains a battery that cannot be disposed of as unsorted municipal waste in the European Union. See the product documentation for specific battery information. The battery is marked with this symbol, which may include lettering to indicate cadmium (Cd), lead (Pb), or mercury (Hg). For proper recycling, return the battery to your supplier or to a designated collection point. For more information see: www.recyclethis.info

Industry Canada ICES-003 Compliance

This device meets the CAN ICES-3 (A)/NMB-3(A) standards requirements.

Symbol Conventions

The symbols that may be found in this document are defined as follows.

Symbol	Description
 Note	Provides additional information to emphasize or supplement important points of the main text.
 Caution	Indicates a potentially hazardous situation, which if not avoided, could result in equipment damage, data loss, performance degradation, or unexpected results.
 Danger	Indicates a hazard with a high level of risk, which if not avoided, will result in death or serious injury.

Safety Instructions

- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
- In the use of the product, you must be in strict compliance with the electrical safety regulations of the nation and region. Please refer to technical specifications for detailed information.
- Input voltage should meet limited power source or PS2 requirements according to the IEC60950-1 or IEC 62368-1 standard. Please refer to technical specifications for detailed information.
- Do not connect several devices to one power adapter as adapter overload may cause overheating or a fire hazard.
- Please make sure that the plug is firmly connected to the power socket.
- If smoke, odor or noise rise from the device, turn off the power at once and unplug the power cable, and then please contact the service center.

Chapter 1 Introduction

1.1 Product Features

This Network camera is a digital monitoring product that integrates video and audio acquisition, intelligent coding and compression, network transmission and other functions. With embedded operating system and high-performance hardware processing platform, it has high stability and reliability, and can meet the needs of various industries.

Based on Ethernet control, the network camera can realize image compression and transmit it to different users through the network. Centralized storage based on NAS can greatly facilitate the storage and call of data.

You can control the webcam through the browser, and set the webcam parameters, intelligent functions, audio and video parameters, image parameters, etc. through the browser. Please refer to the actual equipment for specific function parameters.

1.2 Product Function

This chapter explains the camera from the product function, so that you can get to know and get familiar with the camera more quickly.

System function

- Video recording and capturing pictures

The camera supports instant capture and video recording during preview, and can also configure video recording to realize planned video recording and capture.

- User Management

You can manage many different users through the administrator "admin" user, and configure different permissions for each user.

Event detection function

The camera supports basic events and Smart events. Basic events includes video tampering and exception.

Network function

The camera supports TCP/IP, UDP, MCAST, FTP, SNMP and other network communication protocols; Support open interconnection protocols such as ONVIF.

The function of the product depends on the model, please refer to the technical parameters of the actual product.

Chapter 2 Operation Instructions

Note

- You shall acknowledge that the use of the product with Internet access might be under network security risks. For avoidance of any network attacks and information leakage, please strengthen your own protection. If the product does not work properly, please contact with your dealer or the nearest service center.
 - To ensure the network security of the network camera, we recommend you to have the network camera assessed and maintained termly. You can contact us if you need such service.
-

Before you start:

Step 1 If you want to set the network camera via a LAN (Local Area Network), please refer to Section 2.1 Setting the Network Camera over the LAN.

Step 2 If you want to set the network camera via a WAN (Wide Area Network), please refer to Section 2.2 Setting the Network Camera over the WAN.

2.1 Setting the Network Camera over the LAN

Purpose:

To view and configure the camera via a LAN, you need to connect the network camera in the same subnet with your computer, and install the SADP or iVMS-4200 software to search and change the IP of the network camera.

Note

For the detailed introduction of SADP, please refer to Appendix 1.

2.1.1 Wiring over the LAN

The following figures show the two ways of cable connection of a network camera and a computer:

Purpose:

Step 1 To test the network camera, you can directly connect the network camera to the computer with a network cable as shown in Figure 2-1.

Step 2 Refer to the Figure 2-2 to set network camera over the LAN via a switch or a router.

Figure 2-1 Connecting Directly

Figure 2-2 Connecting via a Switch or a Router

2.2 Activating the Camera

You are required to activate the camera first by setting a strong password for it before you can use the camera.

Activation via Web Browser, Activation via SADP, and Activation via Client Software are all supported.

2.2.1 Activation via SADP Software

SADP software is used for detecting the online device, activating the camera, and resetting the password.

Get the SADP software from the official website, and install the SADP according to the prompts. Follow the steps to activate the camera.

Step 1 Run the SADP software to search the online devices.

Step 2 Check the device status from the device list, and select the inactive device.

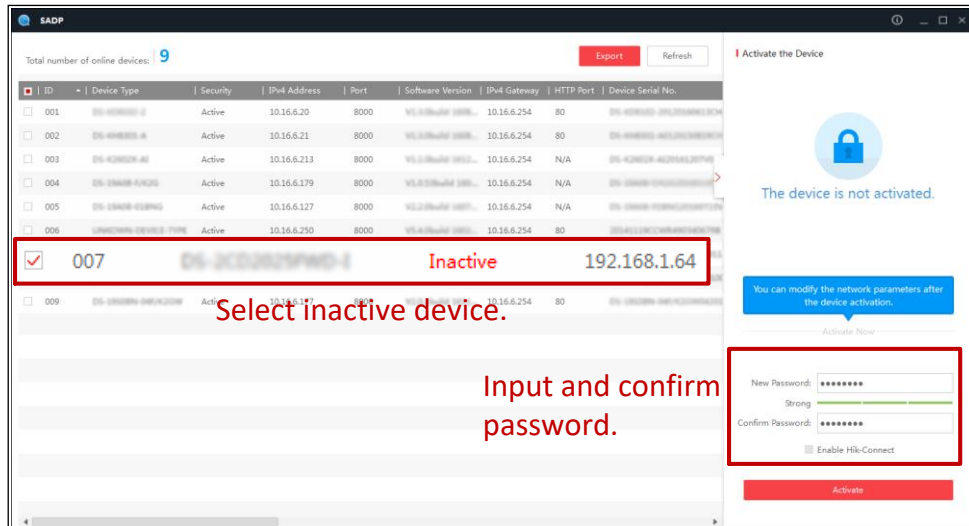

Figure 2-3 SADP Interface

 **Note**

The SADP software supports activating the camera in batch. Refer to the user manual of SADP software for details.

Step 3 Create and input the password in the password field, and confirm the password. A password with user name in it is not allowed.

 **Caution**

STRONG PASSWORD RECOMMENDED

- We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

You can enable the Hik-Connect service for the device during activation.

Step 4 Click Activate to start activation. You can check whether the activation is completed on the popup window. If activation failed, please make sure that the password meets the requirement and try again.

Step 5 Change the device IP address to the same subnet with your computer by either modifying the IP address manually or checking the checkbox of Enable DHCP.

Modify Network Parameters

Enable DHCP
 Enable Hik-Connect

Device Serial No.:

IP Address:

Security Verification

Admin Password:

[Modify](#) [Forgot Password](#)

Figure 2-4 Modify the IP Address

Step 6 Input the admin password and click **Modify** to activate your IP address modification.

2.2.2 Activation via Web Browser

Step 1 Power on the camera, and connect the camera to the network.

Step 2 Input the IP address into the address bar of the web browser, and click **Enter** to enter the activation interface.

 **Note**

- The default IP address of the camera is 192.168.1.64.
 - The computer and the camera should belong to the same subnet.
 - For the camera enables the DHCP by default, you need to use the SADP software to search the IP address.
-

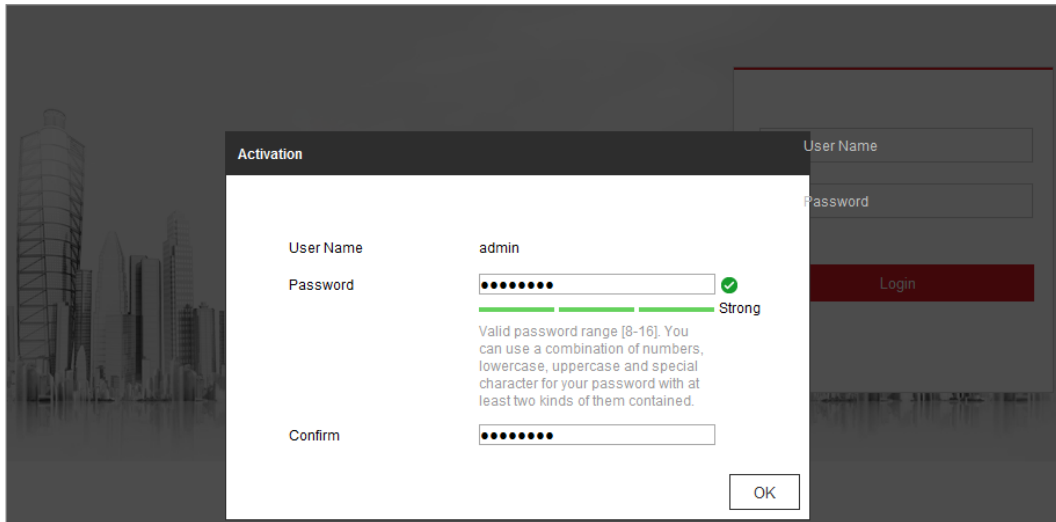

Figure 2-5 Activation via Web Browser

Step 3 Create and input a password into the password field. A password with user name in it is not allowed.

 **Caution**

STRONG PASSWORD RECOMMENDED

We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 4 Confirm the password.

Step 5 Click OK to save the password and enter the live view interface.

2.2.3 (Optional) Setting Security Question

Security question is used to reset the admin password when admin user forgets the password.

Admin user can follow the pop-up window to complete security question settings during camera activation. Or, admin user can go to User Management interface to set up the function.

2.3 Login and Logout

2.3.1 Login

For certain camera models, HTTPS is enabled by default and the camera creates an unsigned certificate automatically. When you access to the camera the first time, the web browser prompts a notification about the certificate issue.

To cancel the notification, install a signed-certificate to the camera.

Step 1 Open the web browser.

Step 2 In the browser address bar, input the IP address of the network camera, and press the Enter key to enter the login interface.

Note

The default IP address is 192.168.1.64. You are recommended to change the IP address to the same subnet with your computer.

Step 3 Input the user name and password.

The admin user should configure the device accounts and user/operator permissions properly. Delete the unnecessary accounts and user/operator permissions.

Note

The IP address gets locked if the admin user performs 7 failed password attempts (5 attempts for the user/operator).

Figure 2-6 Login Interface

Step 4 Click **Login**.

Step 5 (Optional) Install the plug-in before viewing the live video and operating the camera. Follow the installation prompts to install the plug-in. Currently, the camera only support plug-in on the Windows system.

Table 2-1 Install Plugins

OS	Browser Version	Plugin
Windows	<ul style="list-style-type: none"> • IE 8 and upper • Google Chrome 41 and lower • Mozilla Firefox 30 and lower • Edge 16 and lower 	Install the plugin according to instructions.
	<ul style="list-style-type: none"> • Google Chrome 41 and upper • Mozilla Firefox 30 and upper • Edge 16 and upper 	Click  in the preview page to download and install the plugin for high quality view and device functions.

 **Note**

For camera that supports plug-in free live view, if you are using Google Chrome 57 and its above version or Mozilla Firefox 52 and its above version, plug-in installation is not required. But Picture and Playback functions are hidden. To use mentioned function via web browser, change to their lower version, or change to Internet Explorer 8.0 and above version.

2.3.2 Logout

To logout, click the  icon.

2.4 Main Interface

The main interface is shown as follows.

Figure 2-7 Main Interface

Live View: to view the camera and set parameters.

Playback: to search, view and download recordings in the SD card the network camera.

Picture: to search, view and download the pictures stored in the SD card of the network camera.

Configuration: to set the system and function parameters.

VCA: for people counting function.

 **Note**

The interface may vary according to the model of the camera.

Chapter 3 Basic Functions

3.1 Local Parameters

Go to **Configuration > Local** to configure local configurations. Live View Parameters, Record File Settings, Picture and Clip Settings can be configured.

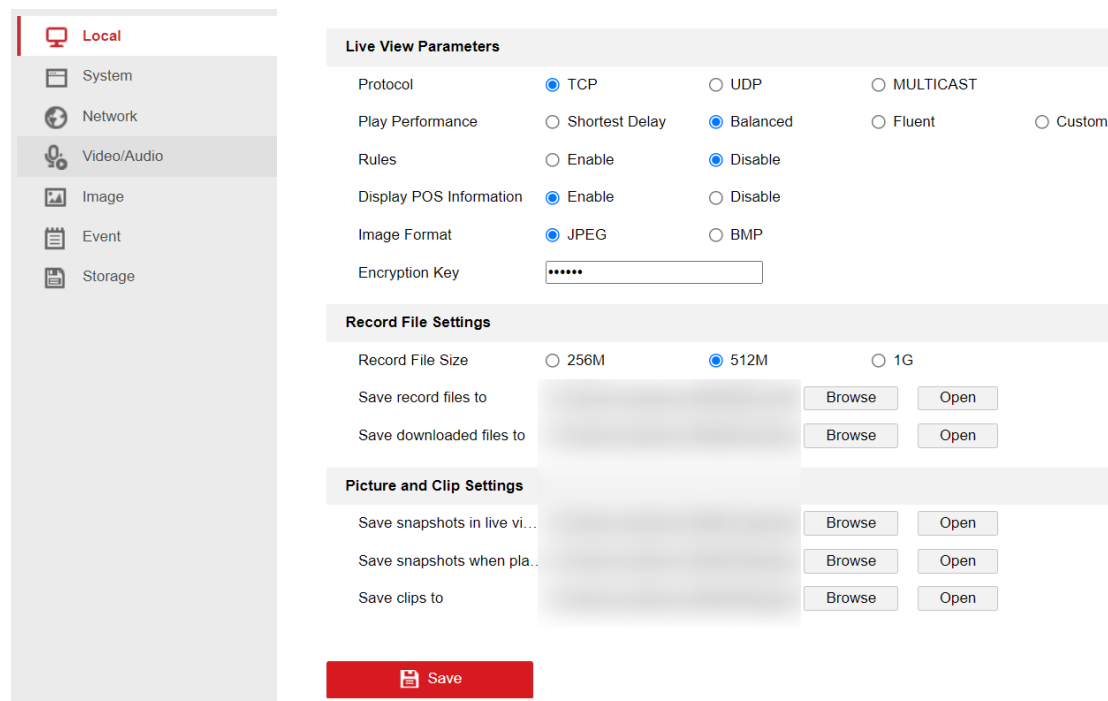

Figure 3-1 Local Parameters

3.1.1 Live View Parameters

● Protocols

TCP, UDP and MULTICAST protocols are supported.

- The default protocol is TCP
- UDP is suitable for the situation that the requirement of video fluency is not high and the network environment is unstable.
- MULTICAST is suitable for multicast addresses with many customers and need to be configured before selection.

● Playback performance:

You can choose the shortest delay, Balanced, Fluent and Custom, and the default is Balanced.

- Shortest delay: Real-time is good, but it may affect the fluency of video.
- Balanced: Give consideration to the real-time and fluency of video playback.
- Fluent: In the same network situation, it takes up less network resources, and the video is smoother than other modes.

- Custom: the frame rate can be set according to the network conditions.
- Rules: You can choose to enable or disable it. When enabled, information boxes will appear on the live screen.
- Display POS Information : it can be enabled or disabled. When enabled, when a target triggers a rule, the live screen will display the attribute information of the target.
- Image Format: set the format of captured pictures as JPEG orb MP.

3.1.2 Record File Setting

- Record File Size: it can be set to 256 M, 512 M and 1 G, indicating the size of a single video file stored locally.
- Save record files to: the path where video files are stored locally. You can choose Browse to change the path, and click Open Folder to open the folder under the archive path.
- Save downloaded files to: the path where the video files saved during playback are stored locally. You can choose Browse to change the path, and click Open Folder to open the folder under the archive path.

3.1.3 Picture and Clip Setting

- Save snapshots in live view to: the path where the captured pictures are stored locally during preview. You can choose Browse to change the path, and click Open Folder to open the folder under the archive path.
- Save snapshots when playback to: the path where captured pictures are stored locally during playback. You can choose Browse to change the path, and click Open Folder to open the folder under the archive path.
- Save clips to: the path where the cut video files are stored locally during playback. You can choose Browse to change the path, and click Open Folder to open the folder under the archive path.

3.2 Live View

3.2.1 Live View Page

Purpose:

The live view page allows you to view the real-time video, capture images, realize PTZ control, set/call presets and configure video parameters.

Log in the network camera to enter the live view page, or you can click Live View on the menu bar of the main page to enter the live view page.

Descriptions of the live view page:

©Hikvision Digital Technology Co., Ltd. All Rights Reserved.

Figure 3-2 Live View Page

- Menu Bar

Click each tab to enter Live View, Playback, Picture, Application, and Configuration page respectively.

- Live View Window

Display the live video.

- Toolbar

Toolbar allows you to adjust the live view window size, the stream type, and the plug-ins. It also allows you to process the operations on the live view page, e.g., start/stop live view, capture, record, start/stop digital zoom, etc.

For IE (Internet Explorer) users, plug-ins as webcomponents and quick time are selectable. And for Non-IE users, webcomponents, quick time, VLC or MJPEG are selectable if they are supported by the web browser.

 **Note**

For camera that supports plug-in free live view, when Google Chrome 45 and its above version or Mozilla Firefox 52 and its above version are used, plug-in installation is not required. But Picture and Playback functions are hidden. To use mentioned function via web browser, change to their lower versions, or change to Internet Explorer 8.0 and its above version.

3.2.2 Starting Live View

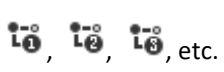

In the live view window as shown in Figure 4-2, click  on the toolbar to start the live view of the camera.

Figure 3-3 Live View Toolbar

Table 3-1 Descriptions of the Toolbar

Icon	Description
	Start/Stop live view.
	The window size is 4:3.
	The window size is 16:9.
	The original window size.
	Self-adaptive window size.
	Live view with the different video streams. Supported video streams vary according to camera models.
	Click to select the third-party plug-in.
	Manually capture the picture.
	Manually start/stop recording.
	Audio on and adjust volume /Mute.
	Pixel Counter
	Start/stop digital zoom function.

Note

The icons vary according to the different camera models.

3.2.3 Record and Capture Pictures Manually

In the live view interface, click  on the toolbar to capture the live pictures; click  to record the live view. The saving paths of the captured pictures and clips can be set on the Configuration > Local page. To configure remote scheduled recording, please refer to 9.1 Record Schedule.

Note

The captured image will be saved as a JPEG file or BMP file in your computer.

3.3 Playback

Purpose:

This section explains how to view the remotely recorded video files stored in the network disks or SD cards.

Step 1 Click **Playback** on the menu bar to enter playback interface.

Figure 3-4 Playback Interface

Step 2 Select the date and click **Search**.

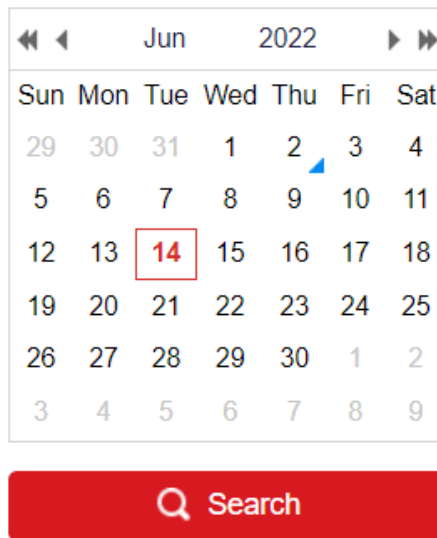

Figure 3-5 Search Video

Step 3 Click  to play the video files found on this date.

The toolbar on the bottom of Playback interface can be used to control playing process.

Figure 3-6 Playback Toolbar

Table 3-2 Description of the buttons

Button	Operation	Button	Operation
	Play		Capture a picture
	Pause		Start/Stop clipping video files
	Stop		Mute
	Speed down		Download

	Speed up		Playback by frame
	Enable/Disable digital zoom		

 **Note**

You can choose the file paths locally for downloaded playback video files and pictures in Local Configuration interface.

You can also input the time and click  to locate the playback point in the **Set playback time** field. You can also click  to zoom out/in the progress bar.

Figure 3-7 Set Playback Time

Figure 3-8 Progress Bar

The different colors of the video on the progress bar stand for the different video types.

Figure 3-9 Video Types

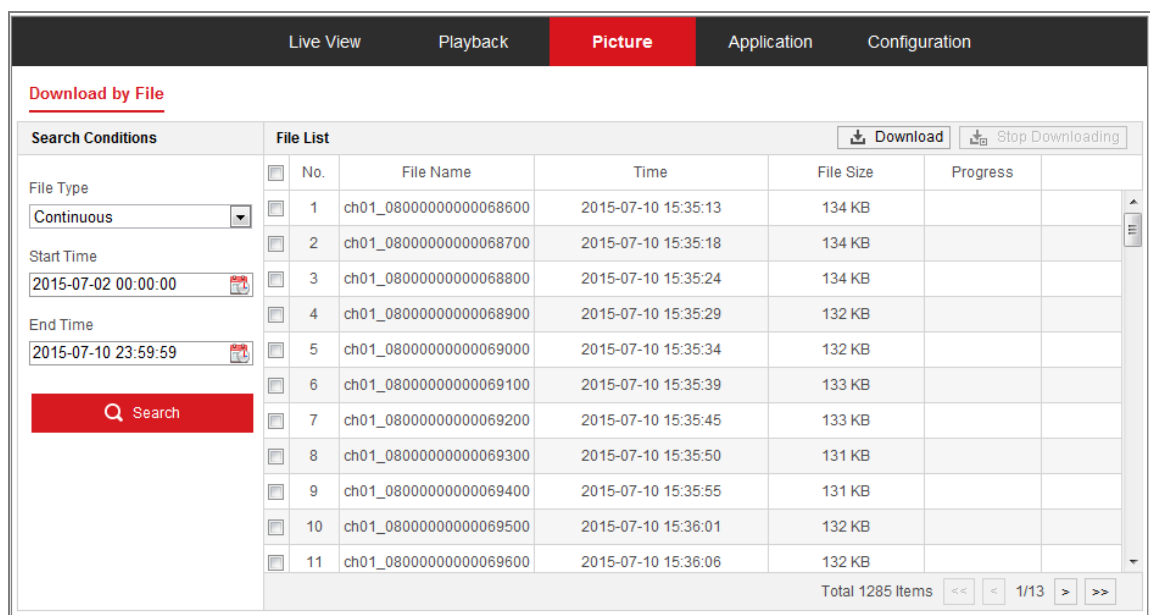

3.4 Picture

Purpose:

Click Picture to enter the picture searching interface. You can search, view, and download the pictures stored in the local storage or network storage.

Note

- Make sure memory card are properly configured before you process the picture search.
- Make sure the capture schedule is configured. Go to **Configuration > Storage > Schedule Settings > Capture** to set the capture schedule.

The screenshot shows the 'Picture' tab in a web interface. It features a 'Download by File' section with search conditions and a 'File List' table. The search conditions include File Type (Continuous), Start Time (2015-07-02 00:00:00), and End Time (2015-07-10 23:59:59). The file list contains 11 items with columns for No., File Name, Time, File Size, and Progress. A 'Download' button and a 'Stop Downloading' button are visible at the top right of the file list. The total number of items is 1285, and the current page is 1/13.

No.	File Name	Time	File Size	Progress

Figure 4-2 Time Settings

Step 2 Select the Time Zone of your location from the drop-down menu.

Step 3 Configure the NTP settings.

Step 4 Click to enable the NTP function.

Step 5 Configure the following settings:

- Server Address: IP address of NTP server.
- NTP Port: Port of NTP server.
- Interval: The time interval between the two synchronizing actions with NTP server.

Step 6 (Optional) You can click the Test button to test the time synchronization function via NTP server.

Time Sync by NTP Server

Note

If the camera is connected to a public network, you should use a NTP server that has a time synchronization function, such as the server at the National Time Center (IP Address: 210.72.145.44). If the camera is set in a customized network, NTP software can be used to establish a NTP server for time synchronization.

Step 7 Configure the manual time synchronization.

- 1) Check the Manual Time Sync. item to enable the manual time synchronization function.
- 2) Click the icon to select the date, time from the pop-up calendar.
- 3) (Optional) You can check Sync. with computer time item to synchronize the time of the device with that of the local PC.

Figure 4-3 Time Sync Manually

Step 8 Click Save to save the settings.

4.1.3 DST

Purpose:

Daylight Saving Time (DST) is a way of making better use of the natural daylight by setting your clock forward one hour during the summer months, and back again in the fall.

Step 1 Go to **Configuration > System > System Settings > DST**

Basic Information Time Settings **DST** RS-485 VCA Resource About

4.2 Maintenance

4.2.1 Upgrade & Maintenance

Purpose:

The upgrade & maintenance interface allows you to process the operations, including reboot, partly restore, restore to default, export/import the configuration files, and upgrade the device.

Step 1 Go to **Configuration > System > Maintenance > Upgrade & Maintenance**.

- Reboot: Restart the device.
- Restore: Reset all the parameters, except the IP parameters and user information, to the default settings.
- Default: Restore all the parameters to the factory default.

 **Note**

- After restoring the default settings, the IP address is also restored to the default IP address, please be careful for this action.
- For camera that supports Wi-Fi, wireless dial, or wlan function, Restore action does not restore the related settings of mentioned functions to default.

● Information Export

Device Parameters: click to export the current configuration file of the camera.

This operation requires admin password to proceed.

For the exported file, you also have to create an encryption password. The encryption password is required when you import the file to other cameras.

Diagnose Information: click to download log and system information.

● Import Config. File

Configuration file is used for the batch configuration of the cameras.

Step 2 Click Browse to select the saved configuration file.

Step 3 Click Import and input the encryption password that you set during exporting.

 **Note**

The camera needs rebooting after importing configuration file.

Upgrade: Upgrade the device to a certain version.

Step 4 Select firmware or firmware directory to locate the upgrade file.

- Firmware: Locate the exact path of the upgrade file.
- Firmware Directory: Only the directory the upgrade file belongs to is required.

Step 5 Click Browse to select the local upgrade file and then click **Upgrade** to start remote upgrade.

 **Note**

The upgrading process will take 1 to 10 minutes. Please don't disconnect power of the camera during the process, and the camera reboots automatically after upgrade.

4.2.2 Log

Purpose:

The operation, alarm, exception and information of the camera can be stored in log files. You can also export the log files on your demand.

Before you start:

Please configure network storage for the camera or insert a SD card in the camera.

Step 1 Go to **Configuration > System > Maintenance > Log**.

Upgrade & Maintenance **Log** System Service

Figure 4-9 Log Searching

Step 4 To export the log files, click **Export** to save the log files.

4.2.3 System Service

Purpose:

System service settings refer to the hardware service the camera supports. Supported functions vary according to the different cameras. For the cameras support IR Light, ABF (Auto Back Focus), Auto Defog, or Status LED, you can select to enable or disable the corresponding service according to the actual demands.

Upgrade & Maintenance

Log

System Service

Hardware

Enable IR Light

Software

Enable Third Stream

Note: After enabling the three bit stream, it needs to be restarted to take effect.

 Save

Figure 4-10 System Service

- **Third Stream:** For some models, third stream is not enabled by default. Check **Enable Third Stream** to enable the function. When the Third Stream is enabled, the smart event will not be supported.

4.3 Security

Configure the parameters, including Authentication, IP Address Filter, and Security Service from security interface.

4.3.1 Authentication

Purpose:

You can specifically secure the stream data of live view.

Step 1 Go to **Configuration > System > Security > Authentication**.

Authentication	IP Address Filter	Security Service
RTSP Authentication	<input type="text" value="digest"/>	<input type="button" value="v"/>
WEB Authentication	<input type="text" value="digest"/>	<input type="button" value="v"/>

Figure 4-11 Authentication

Step 2 Set up authentication method for RTSP authentication and WEB authentication.

Caution

Digest is the recommended authentication method for better data security. You must be aware of the risk if you adopt basic as the authentication method.

Step 3 Click **Save**.

4.3.2 IP Address Filter

Purpose:

This function makes it possible for access control.

Step 1 Go to **Configuration > System > Security > IP Address Filter**

Figure 4-12 IP Address Filter Interface

Step 2 Check the checkbox of Enable IP Address Filter.

Step 3 Select the type of IP Address Filter in the drop-down list, **Forbidden** and **Allowed** are selectable.

Step 4 Set the IP Address Filter list.

- Add an IP Address
 - 1) Click the **Add** to add an IP.
 - 2) Input the IP Adresse.

Add an IP

- 3) Click the **OK** to finish adding.

- Modify an IP Address
 - 1) Left-click an IP address from filter list and click **Modify**.
 - 2) Modify the IP address in the text filed.

Modify an IP

- 3) Click the **OK** to finish modifying.
- Delete an IP Address or IP Addresses.
 - 1) Select the IP address(es) and click **Delete**.
 - 2) Click **Save** to save the settings.

4.3.3 Security Service

To enable the remote login, and improve the data communication security, the camera provides the security service for better user experience.

Step 1 Go to Configuration > System > Security > Security Service.

Figure 4-13 Security Service

Step 2 Check the checkbox of Enable Illegal Login Lock.

Step 3 Illegal Login Lock: it is used to limit the user login attempts. Login attempt from the IP address is rejected if admin user performs 7 failed user name/password attempts (5 times for the operator/user).

Note

If the IP address is rejected, you can try to login the device after 30 minutes.

4.4 User Management

4.4.1 User Management

Administrator

The admin user can add, delete or modify user accounts, and grant them different permissions. We highly recommend you manage the user accounts and permissions properly.

Step 1 Go to **Configuration > System > User Management**.

 **Note**

Admin password if required for adding and modifying a user account.

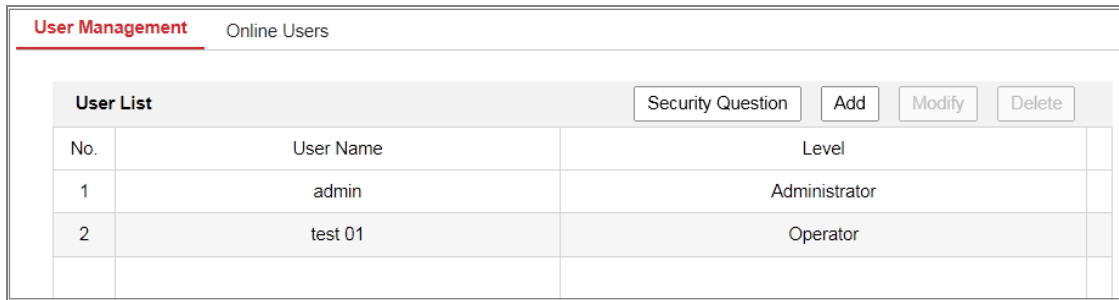

Figure 4-14 User Management Interface

Adding a User

The *admin* user has all permissions by default and can create/modify/delete other accounts.

The *admin* user cannot be deleted and you can only change the *admin* password.

Step 2 Click **Add** to add a user.

Step 3 Input the Admin Password, User Name, select Level and input Password.

Add user

- Remote: PTZ Control
- Remote: Playback

Figure 4-15 Add a User

Note

Up to 16 user accounts can be created.

Users of different levels own different default permissions. Operator and user are selectable.

Caution

Strong Password recommended

We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 4 You can check or uncheck the permissions for the new user.

Step 5 Click **OK** to finish the user addition.

Modify a User

Step 6 Left-click to select the user from the list and click **Modify**.

Step 7 Modify the User Name, Level and Password.

Strong Password recommended

We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.

Step 8 You can check or uncheck the permissions.

Step 9 Click **OK** to finish the user modification.

Step 10 Deleting a User

- 1) Click to select the user you want to delete and click **Delete**.
- 2) Click **OK** on the pop-up dialogue box to confirm the deletion.

Operator/User

Operator or user can modify password. Old password is required for this action.

4.4.2 Security Question

Purpose:

Security question is used to reset the admin password when admin user forgets the password.

Set Security Questions

You can set the security questions during camera activation. Or you can set the function at user management interface.

Security question setting is not cleared when you restore the camera (not to default).

Steps:

Step 1 Go to **Configuration > System > User Management**.

Step 2 Click Account Security Question.

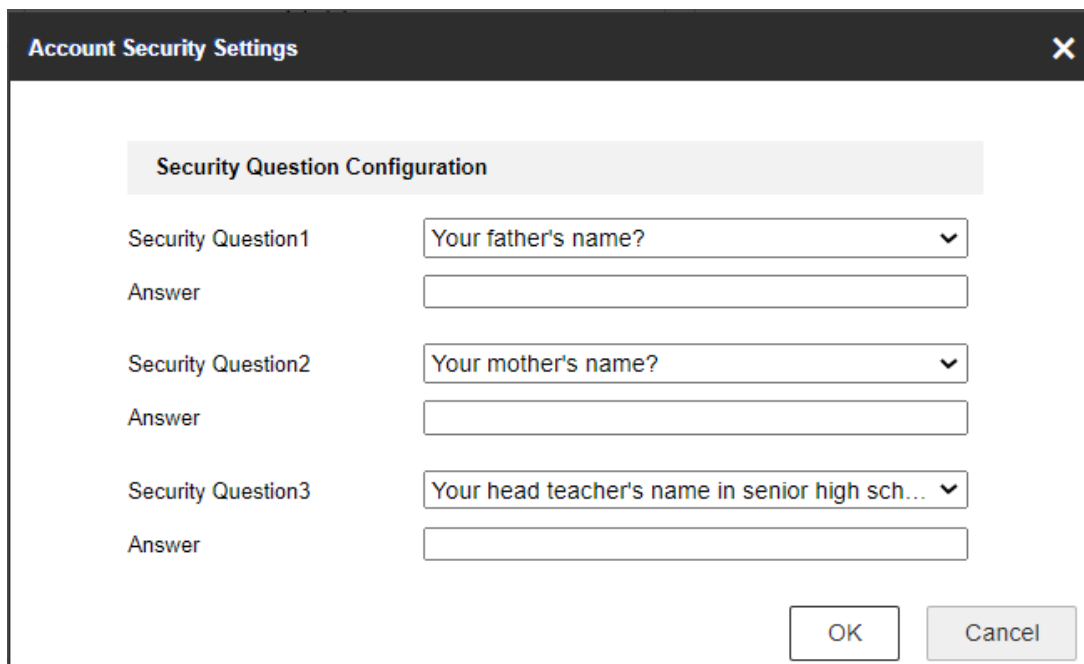

Figure 4-16 Account Security Question

Step 3 Select questions and input answers.

Step 4 Click **OK** to save the settings.

Reset Admin Password:

Before you start:

The PC used to reset password and the camera should belong to the same IP address segment of the same LAN.

Steps:

Step 5 Go to **Configuration > Network > Advanced Settings > QoS**

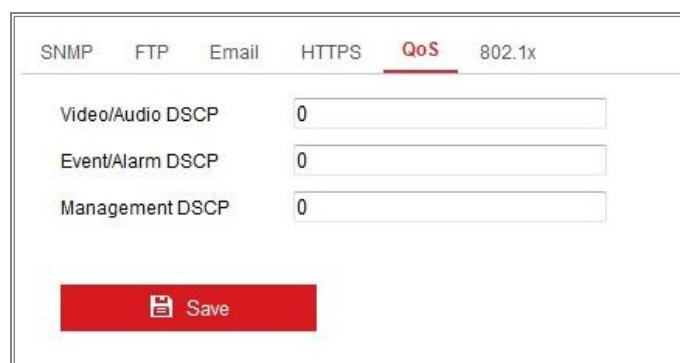

Figure 4-17 QoS Settings

Step 6 Configure the QoS settings, including Video/Audio DSCP, Event/Alarm DSCP and Management DSCP.

Step 7 The valid value range of the DSCP is 0 to 63. The bigger the DSCP value is, the higher the priority is.

 **Note**

DSCP refers to the Differentiated Service Code Point; and the DSCP value is used in the IP header to indicate the priority of the data.

Step 8 Click **Save** to save the settings.

 **Note**

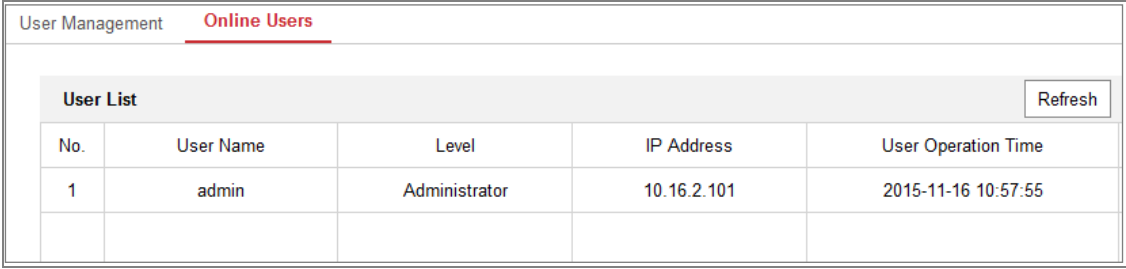

A reboot is required for the settings to take effect.

4.4.3 Online Users

Purpose:

You can see the current users who are visiting the device through this interface. User information, such as user name, level, IP address, and operation time, is displayed in the User List.

Click **Refresh** to refresh the list.

User Management		Online Users		
User List				
No.	User Name	Level	IP Address	User Operation Time
1	admin	Administrator	10.16.2.101	2015-11-16 10:57:55

Figure 4-18 View the Online Users

Chapter 5 Network Settings

Purpose:

Follow the instructions in this chapter to configure the basic settings and advanced settings.

5.1 Basic Settings

Purpose:

You can configure the parameters, including TCP/IP, DDNS, Port, and NAT, etc., by following the instructions in this section.

5.1.1 TCP/IP

Purpose:

TCP/IP settings must be properly configured before you operate the camera over network. The camera supports both the IPv4 and IPv6. Both versions can be configured simultaneously without conflicting to each other, and at least one IP version should be configured.

Step 1 Go to **Configuration > Network > Basic Settings > TCP/IP**.

TCP/IP DDNS Port NAT Multicast

NIC Type	Auto	▼
	<input type="checkbox"/> DHCP	
IPv4 Address	10.184.140.164	Test
IPv4 Subnet Mask	255.255.255.0	
IPv4 Default Gateway	10.184.140.254	
IPv6 Mode	Route Advertisement	▼ View Route Advertisement
IPv6 Address	fe80::be5e:33ff:fe13:1bee	
IPv6 Subnet Mask	64	
IPv6 Default Gateway	::	
Mac Address	bc:5e:33:13:1b:ee	
MTU	1500	

DNS Server

Preferred DNS Server	10.1.26.188
Alternate DNS Server	10.1.7.120

 Save

Figure 5-1 TCP/IP Settings

Step 2 Configure the basic network settings, including the NIC Type, IPv4 or IPv6 Address, IPv4 or IPv6 Subnet Mask, IPv4 or IPv6 Default Gateway, and MTU settings.

Step 3 Configure the DNS server. Input the preferred DNS server, and alternate DNS server.

Step 4 Click **Save** to save the above settings.

 **Note**

- The valid value range of MTU is 1280 to 1500.
- A reboot is required for the settings to take effect.

5.1.2 DDNS

Purpose:

As most public internet users in use dynamic IP, Dynamic DNS (DDNS) for network access is best for camera.

Before you start:

Registration on the DDNS server is required before configuring the DDNS settings of the camera.

Step 1 Go to Configuration > Network > Basic Settings > DDNS.

Step 2 Check the Enable DDNS checkbox to enable this feature.

Step 3 Select DDNS Type. Two DDNS types are selectable: DynDNS and NO-IP.

● DynDNS:

Step 1 Enter **Server Address** of DynDNS (e.g. members.dyndns.org).

Step 2 In the **Domain** text field, enter the domain name obtained from the DynDNS website.

Step 3 Enter the **User Name** and **Password** registered on the DynDNS website.

Step 4 Click **Save** to save the settings.

The screenshot shows a configuration page with tabs for TCP/IP, DDNS (selected), Port, NAT, and Multicast. Under the DDNS tab, there is a checkbox for 'Enable DDNS' which is checked. Below it are several input fields: 'DDNS Type' is a dropdown menu set to 'DynDNS'; 'Server Address' is 'members.dyndns.org' with a green checkmark; 'Domain' is '123.dyndns.org' with a green checkmark; 'User Name' is 'test' with a green checkmark; 'Port' is '0'; 'Password' is masked with dots and has a green checkmark; 'Confirm' is also masked with dots and has a green checkmark. At the bottom is a red 'Save' button with a floppy disk icon.

Figure 5-2 DynDNS Settings

● NO-IP:

Step 1 Choose the DDNS Type as NO-IP.

Enable DDNS

DDNS Type

Domain

User Name

Port

Password

Confirm ✓

 Save

Figure 5-3 NO-IP DNS Settings

Step 2 Enter the Server Address as www.noip.com

Step 3 Enter the Domain name you registered.

Step 4 Enter the User Name and Password.

Step 5 Click **Save** and then you can view the camera with the domain name.

 **Note**

Reboot the device to make the settings take effect.

5.1.3 Port

Step 1 Go to **Configuration > Network > Basic Settings > Port**.

HTTP Port

RTSP Port

HTTPS Port

Server Port

WebSocket Port

Figure 5-4 Port Settings

Step 2 Set the ports of the camera.

HTTP Port: The default port number is 80, and it can be changed to any port No. which is not occupied.

RTSP Port: The default port number is 554 and it can be changed to any port No. ranges from 1 to 65535.

HTTPS Port: The default port number is 443, and it can be changed to any port No. which is not occupied.

Server Port: The default server port number is 8000, and it can be changed to any port No. ranges from 2000 to 65535.

WebSocket Port: The default port number is 7681. It can be changed to any port No. ranges from 1 to 65535.

 **Note**

The WebSocket protocol is used for plug-in free live view. For detailed information, see 5.2.9.

Step 3 Click **Save** to save the settings.

 **Note**

A reboot is required for the settings to take effect.

5.1.4 NAT (Network Address Translation)

Purpose:

NAT interface allows you to configure the UPnP™ parameters.

Universal Plug and Play (UPnP™) is a networking architecture that provides compatibility among networking equipment, software and other hardware devices. The UPnP protocol allows devices to connect seamlessly and to simplify the implementation of networks in the home and corporate environments.

With the function enabled, you don't need to configure the port mapping for each port, and the camera is connected to the Wide Area Network via the router.

Enable UPnP™

Port Mapping Mode Auto ▼				
Port Type	External Port	External IP Address	Internal Port	Status
HTTP	0	0.0.0.0	80	Not Valid
HTTPS	0	0.0.0.0	443	Not Valid
RTSP	0	0.0.0.0	554	Not Valid
Server Port	0	0.0.0.0	8000	Not Valid
WebSocket	0	0.0.0.0	7681	Not Valid

Figure 5-5 UPnP Settings

Step 1 Go to **Configuration > Network > Basic Settings > NAT**.

Step 2 Check the checkbox to enable the UPnP™ function.

 **Note**

Only when the UPnP™ function is enabled, ports of the camera are active.

Step 3 Choose a friendly name for the camera, or you can use the default name.

Step 4 Select the port mapping mode. Manual and Auto are selectable.

 **Note**

- If you select Auto, you should enable UPnP™ function on the router.
 - If you select Manual, you can customize the value of the external port and complete port mapping settings on router manually.
-

Step 5 Click **Save** to save the settings.

5.1.5 Multicast

The Multicast sends a stream to the multicast group address and allows multiple clients to acquire the stream at the same time by requesting a copy from the multicast group address. Before utilizing this function, you have to enable the Multicast function of your router.

Step 1 Go to **Configuration > Network > Basic Settings > Multicast**.

Step 2 Configure the parameters for Multicast.

- IP Address: The IP address of the multicast host.
-

 **Note**

The range for multicast IP address is 224.0.0.19~239.255.255.255

- Stream Type
Choose the type of stream according to your needs.
- Video Port and Audio Port: Port for Video and Audio.

Step 3 Click **Save**.

5.2 Advanced Settings

Purpose:

You can configure the parameters, including SNMP, FTP, Email, HTTPS, QoS, 802.1x, etc., by following the instructions in this section.

5.2.1 SNMP

Purpose:

You can set the SNMP function to get camera status, parameters and alarm related information, and manage the camera remotely when it is connected to the network.

Before you start:

Before setting the SNMP, please download the SNMP software and manage to receive the camera information via SNMP port. By setting the Trap Address, the camera can send and download basic parameters from the SNMP management program.

 **Note**

The SNMP version you select should be the same as that of the SNMP software. And you also need to use the different version according to the security level you required. SNMP v1 provides no security and SNMP v2 requires password for access. And SNMP v3 provides encryption and if you use the third version, HTTPS protocol must be enabled.

 **Caution**

STRONG PASSWORD RECOMMENDED

- We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

Steps:

Step 1 Enter the SNMP Settings interface: Configuration > Network > Advanced Settings > SNMP.

SNMP Other Settings

SNMP Port:

Save

Figure 5-6 SNMP Settings

Step 2 Check the checkbox of Enable SNMPv1, Enable SNMP v2c, Enable SNMPv3 to enable the feature correspondingly.

Step 3 Configure the SNMP settings.

 **Note**

The settings of the SNMP software should be the same as the settings you configure here.

Step 4 Click **Save** to save and finish the settings.

 **Note**

- A reboot is required for the settings to take effect.
- To lower the risk of information leakage, you are suggested to enable SNMP v3 instead of SNMP v1 or v2.

5.2.2 FTP

Purpose:

You can configure the FTP server related information to enable the uploading of the captured pictures to the FTP server.

Step 1 Go to Configuration > Network > Advanced Settings > FTP.

SNMP	FTP	Email	HTTPS	QoS	802.1x	Integration Protocol
FTP Protocol	FTP					
Server Address	0.0.0.0					
Port	21					
User Name	admin					<input type="checkbox"/> Anonymous
Password	*****					
Confirm	*****					
Directory Structure	Save in the root directory					
Picture Filing Interval	OFF					Day(s)
Picture Name	Default					
	<input type="checkbox"/> Upload Picture					
	<input type="button" value="Test"/>					
<input type="button" value="Save"/>						

Figure 5-7 FTP Settings

Step 2 Input the FTP address and port.

Step 3 Configure the FTP settings; and the user name and password are required for the FTP server login.

STRONG PASSWORD RECOMMENDED

- We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
 - Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
-

Step 4 Set the directory structure and picture filing interval.

- **FTP and SFTP:** It is recommended to use the **SFTP** as it uses encrypted transmission and is thus safer. You need an “user name” and a “password” for FTP access.
- **Anonymous Access to the FTP Server (in which case the user name and password won't be required.):** Check the **Anonymous** checkbox to enable the anonymous access to the FTP server.
- **Directory:** In the **Directory Structure** field, you can select the root directory, parent directory and child directory. When the parent directory is selected, you have the option to use the Device Name, Device Number or Device IP for the name of the directory; and when the Child Directory is selected, you can use the Camera Name or Camera No. as the name of the directory.
- **Picture Filing Interval:** For better picture management, you can set the picture filing interval from 1 day to 30 days. Pictures captured in the same time interval will be saved in one folder named after the beginning date and ending date of the time interval.
- **Picture Name:** Set the naming rule for captured picture files. You can choose **Default** in the drop-down list to use the default rule, that is, *IP address channel number capture time event type.jpg* (e.g., *10.11.37.189_01_20150917094425492_OBJECT_TRACKING.jpg*).

Or you can customize it by adding a **Custom Prefix** to the default naming rule.

- **Upload Picture:** To enable uploading the captured picture to the FTP server.

Step 5 Check the Upload Picture checkbox to enable the function.

The anonymous access function must be supported by the FTP server.

Step 6 Click **Save** to save the settings.

5.2.3 Email

Purpose:

The system can be configured to send an Email notification to all designated receivers if an alarm event is detected, e.g. video tampering, etc.

Before you start:

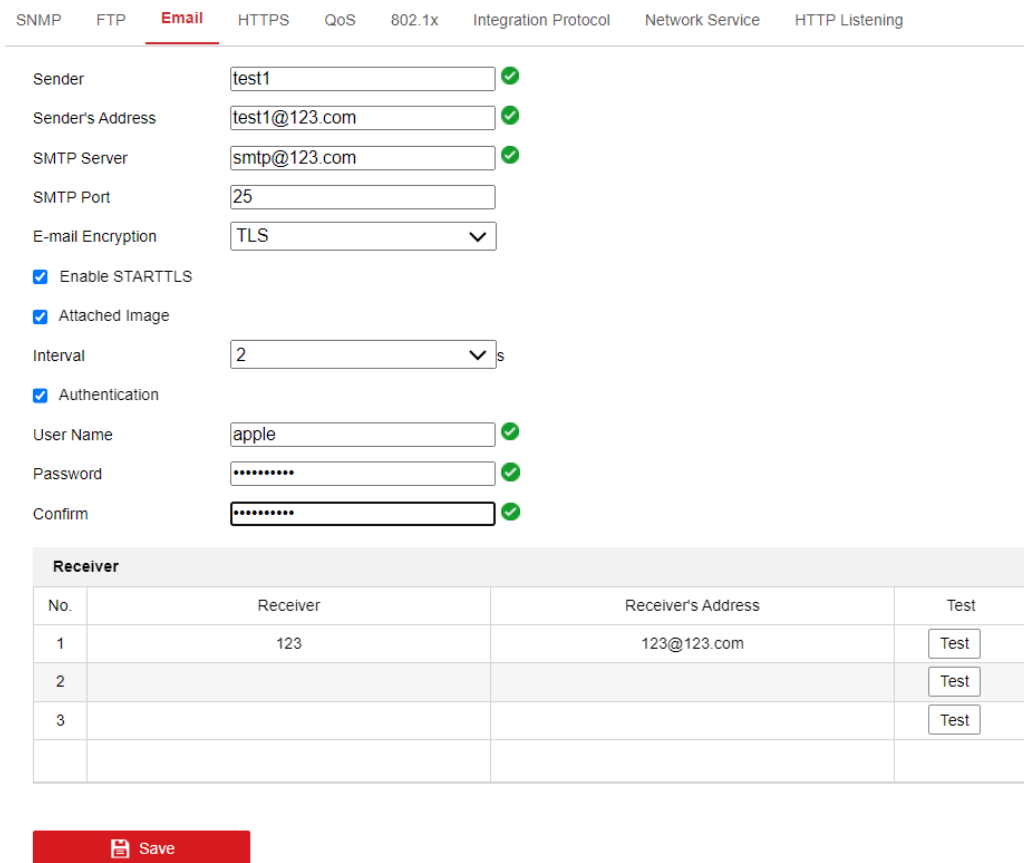

Step 1 Please configure the DNS Server settings under **Configuration > Network > Basic Settings > TCP/IP** before using the Email function.

 **Note**

Please refer to Section 5.1.1 TCP/IP for detailed information.

Step 2 Go to **Configuration > Network > Basic Settings > TCP/IP** to set the IPv4 Address, IPv4 Subnet Mask, IPv4 Default Gateway and the Preferred DNS Server.

Step 3 Go to **Configuration > Network > Advanced Settings > Email**.

The screenshot shows the 'Email' configuration page with various settings and a table for receivers.

Sender Settings:

- Sender: test1 ✓
- Sender's Address: test1@123.com ✓
- SMTP Server: smtp@123.com ✓
- SMTP Port: 25
- E-mail Encryption: TLS
- Enable STARTTLS
- Attached Image
- Interval: 2 s
- Authentication
- User Name: apple ✓
- Password: [masked] ✓
- Confirm: [masked] ✓

Receiver Table:

No.	Receiver	Receiver's Address	Test
1	123	123@123.com	<input type="button" value="Test"/>
2			<input type="button" value="Test"/>
3			<input type="button" value="Test"/>

Figure 5-8 Email Setting

Step 4 Configure the following settings:

- **Sender:** The name of the email sender.
- **Sender's Address:** The email address of the sender.
- **SMTP Server:** IP address or host name (e.g., smtp.263xmail.com) of the SMTP Server.

- **SMTP Port:** The SMTP port. The default TCP/IP port for SMTP is 25 (not secured). And the SSL SMTP port is 465.
 - **Email Encryption:** None and SSL are selectable. When you select SSL and disable STARTTLS, e-mails will be sent after encrypted by SSL. The SMTP port should be set as 465 for this encryption method. When you select SSL and enable STARTTLS, emails will be sent after encrypted by STARTTLS, and the SMTP port should be set as 25.
-

 **Note**

If you want to use STARTTLS, make sure that the protocol is supported by your e-mail server. If you check the Enable STARTTLS checkbox when the protocol is not supported by your e-mail sever, your e-mail will not be encrypted.

- **Attached Image:** Check the checkbox of Attached Image if you want to send emails with attached alarm images.
 - **Interval:** The interval refers to the time between two actions of sending attached pictures.
 - **Authentication** (optional): If your email server requires authentication, check this checkbox to use authentication to log in to this server and input the login user name and password.
-

 **Caution****STRONG PASSWORD RECOMMENDED**

- We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
 - Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
-

- The **Receiver** table: Select the receiver to which the email is sent. Up to 3 receivers can be configured.
 - **Receiver:** The name of the user to be notified.
 - **Receiver's Address:** The email address of user to be notified.
-

Step 5 Click **Save** to save the settings.

5.2.4 Platform Access

Purpose:

Platform access provides you an option to manage the devices for remote real time monitoring via the platform.

Step 1 Go to **Configuration > Network > Advanced Settings > Platform Access**.

Step 2 Check the checkbox of **Enable** to enable the platform access function of the device.

Step 3 Select the **Platform Access Mode**.

 **Note**

Hik-Connect is an application for mobile devices. With the App, you can view live image of the camera, receive alarm notification and so on.

If you select Platform Access Mode as Hik-Connect,

- 1) Click and read "Terms of Service" and "Privacy Policy" in pop-up window.
 - 2) Create a verification code or change the verification code for the camera.
-

 **Note**

- The verification code is required when you add the camera to Hik-Connect app.
 - For more information about the Hik-Connect app, refer to Hik-Connect Mobile Client User Manual.
-

Step 4 You can use the default server address. Or you can check the Custom checkbox on the right and input a desired server address.

Step 5 Click **Save** to save the settings.

5.2.5 HTTPS

Purpose:

HTTPS provides authentication of the web site and its associated web server, which protects against Man-in-the-middle attacks.

 **Note**

- If HTTPS is enabled by default, the camera creates an unsigned certificate automatically. When you visit the camera via HTTPS, the web browser will send a notification about the certificate issue. Install a signed-certificate to the camera to cancel the notification.
-

Step 1 G to **Configuration > Network > Advanced Settings > HTTPS**.

Step 2 Check Enable to access the camera via HTTP or HTTPS protocol.

Step 3 Check Enable HTTPS Browsing to access the camera only via HTTPS protocol.

Figure 5-9 HTTPS Configuration Interface

Step 4 Create the self-signed certificate or authorized certificate.

Figure 5-10 Create Self-signed Certificate

Create the self-signed certificate

- 1) Select **Create Self-signed Certificate** as the Installation Method.
- 2) Click **Create** button to enter the creation interface.
- 3) Enter the country, host name/IP, validity and other information.
- 4) Click **OK** to save the settings.

Note

If you already had a certificate installed, the Create Self-signed Certificate is grayed out.

Create the request and import the authorized certificate

- 1) Select Create the certificate request first and continue the installation as the Installation Method.
- 2) Click Create button to create the certificate request. Fill in the required information in the popup window.
- 3) Click Download to download the certificate request and submit it to the trusted certificate authority for signature.

- 4) After receiving the signed valid certificate, you can import the certificate in two ways:
- Select Signed certificate is available, Start the installation directly. Click Browse and Install to import the certificate to the device.

The screenshot shows the 'Install Certificate' window. Under 'Installation Method', the option 'Signed certificate is available, Start the installation directly.' is selected with a radio button. Below this, there is a text input field for 'Install Signed Certificate' and two buttons: 'Browse' and 'Install'. At the bottom left, there is a red 'Save' button with a floppy disk icon.

Figure 5-11 Import the Certificate (1)

- Select Create the certificate request first and continue the installation. Click Browse and Install to import the certificate to the device.

The screenshot shows the 'Install Certificate' window. Under 'Installation Method', the option 'Create the certificate request first and continue the installation.' is selected with a radio button. Below this, there are three buttons: 'Create', 'Download', and 'Delete'. The 'Create' button is active and shows the text 'C=CN, H/IP=10.11.11.111'. Below these buttons, there is a text input field for 'Install Generated Certificate' and two buttons: 'Browse' and 'Install'.

Figure 5-12 Import the Certificate (2)

There will be the certificate information after your successfully creating and installing the certificate.

The screenshot shows the 'Installed Certificate' window. It displays a table with columns for 'Property' and 'Delete'. The table contains several rows of certificate information, which are mostly blurred. A 'Delete' button is visible in the top right corner of the table area.

Figure 5-13 Installed Certificate

Step 5 Export and save the certificate for verification when adding the device to client software.

Note

The exported certificate should be saved in the certificate folder of your client software before adding the device to your PC client.

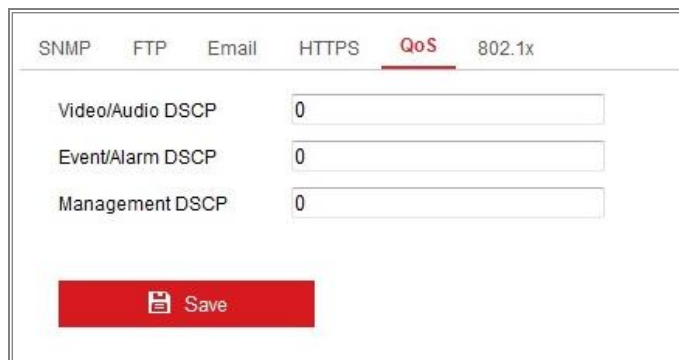

Step 6 Click the **Save** button to save the settings.

5.2.6 QoS

Purpose:

QoS (Quality of Service) can help solve the network delay and network congestion by configuring the priority of data sending.

Step 1 Enter the QoS Settings interface: **Configuration > Network > Advanced Settings > QoS**.

Category	Value
Video/Audio DSCP	0
Event/Alarm DSCP	0
Management DSCP	0

Save

Figure 5-14 QoS Settings

Step 2 Configure the QoS settings, including Video/Audio DSCP, Event/Alarm DSCP and Management DSCP.

The valid value range of the DSCP is 0 to 63. The bigger the DSCP value is, the higher the priority is.

Note

DSCP refers to the Differentiated Service Code Point; and the DSCP value is used in the IP header to indicate the priority of the data.

Step 3 Click **Save** to save the settings.

Note

A reboot is required for the settings to take effect.

5.2.7 802.1X

Purpose:

The IEEE 802.1X standard is supported by the network cameras, and when the feature is enabled, the camera data is secured and user authentication is needed when connecting the camera to the network protected by the IEEE 802.1X.

Before you start:

The authentication server must be configured. Please apply and register a user name and password for 802.1X in the server.

 **Caution**

- For your privacy and to better protect your system against security risks, we strongly recommend the use of strong passwords for all functions and network devices. The password should be something of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers and special characters) in order to increase the security of your product.
- Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.

Step 1 Go to **Configuration > Network > Advanced Settings > 802.1X**.

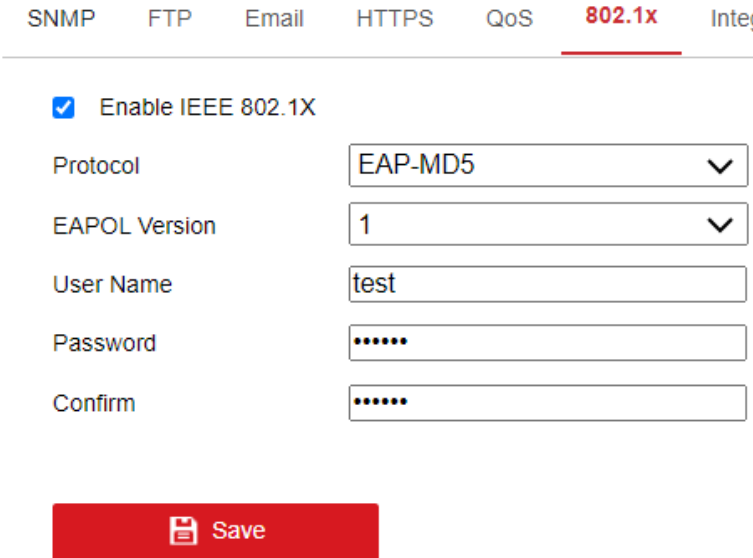

Figure 5-15 802.1X Settings

Step 2 Check the **Enable IEEE 802.1X** checkbox to enable the feature.

Step 3 Configure the 802.1X settings, including Protocol, EAPOL version, User Name, Password and Confirm.

 **Note**

The **EAPOL version** must be identical with that of the router or the switch.

Step 4 Enter the user name and password to access the server.

Step 5 Click **Save** to finish the settings.

 **Note**

A reboot is required for the settings to take effect.

5.2.8 Integration Protocol

Purpose:

If you need to access to the camera through the third party platform, you can enable CGI function. And if you need to access to the device through ONVIF protocol, you can configure ONVIF user in this interface. Refer to ONVIF standard for detailed configuration rules.

ONVIF

Step 1 Check the **Enable ONVIF** checkbox to enable the function.

Step 2 Add ONVIF users. Up to 16 users are allowed.

Step 3 Set the user name and password, and confirm the password. You can set the user as media user, operator, and administrator.

 **Note**

ONVIF user account is different from the camera user account. You have set ONVIF user account independently.

Step 4 Save the settings.

 **Note**

User settings of ONVIF are cleared when you restore the camera.

5.2.9 Network Service

You can control the ON/OFF status of certain protocol that the camera supports.

 **Note**

- Keep unused function OFF for security concern.
 - Supported functions vary according to camera models.
-

- WebSocket

WebSocket protocol should be enabled if you use Google Chrome 45 and its above version or Mozilla Firefox 52 and its above version to visit your camera. Otherwise, live view, image capture, and digital zoom function can not be used.

– If the camera uses HTTP, enable **WebSocket**.

- SDK Service and Enhanced SDK Service

If you want to add the device to the client software, you should enable SDK Service or Enhanced SDK Service.

- **SDK Service:** SDK protocol is used.
- **Enhanced SDK Service:** SDK over TLS protocol is used. Communication between the device and the client software is secured by using TLS (Transport Layer Security) protocol.

● **TLS (Transport Layer Security)**

The device offers TLS 1.1 and TLS 1.2. Enable one or more protocol versions according to your need.

5.2.10 HTTPS Listening

Purpose:

The HTTPS Listening supports uploading the alarm information to a target IP or domain, one that supports http protocol transmission.

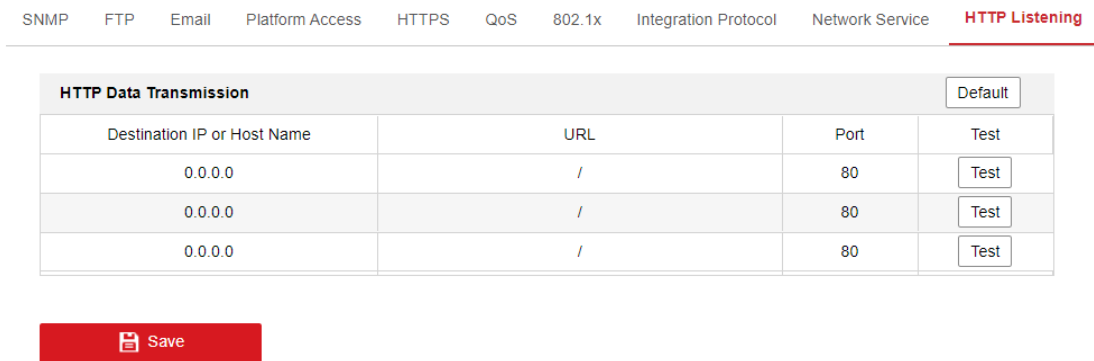

Figure 5-16 HTTPS Listening

Step 1 Click Destination IP or Host Name, URL and Port to enter the target service (Up to 3 services can be set).

Step 2 Click **Test** to test the target service.

Step 3 Click Default to reset the entered data.

Step 4 Click **Save**.

Chapter 6 Video/Audio Settings

Purpose:

Follow the instructions below to configure the video setting, ROI, Display info. on Stream, etc.

6.1 Video

For certain camera models, you can configure parameters for available video streams, for example, the main stream, the sub-stream, etc. And you can also customize additional video streams for further needs.

- On **Video** page, set-up available video streams.
- On **Custom Video** page, add extra video streams

Step 1 Go to **Configuration > Video/Audio > Video**

Video	Audio	ROI	Video Encryption
Stream Type	Main Stream(Normal) ▼		
Video Type	Video&Audio ▼		
Resolution	1920*1080P ▼		
Bitrate Type	Variable ▼		
Video Quality	Medium ▼		
Frame Rate	12 ▼	fps	
Max. Bitrate	4096	Kbps	
Video Encoding	H.264 ▼		
H.264+	OFF ▼		
Profile	Main Profile ▼		
I Frame Interval	12		
SVC	OFF ▼		
Smoothing	<input type="range" value="50"/> [Clear<->Smooth]		
Video Encryption	OFF ▼		

 Save

Figure 6-1 Video Settings

Step 2 Select the Stream Type.

Supported stream types are listed in the drop-down list.

 **Note**

- For some models, the **Third Stream** is not enabled by default. Go to **System > Maintenance > System Service > Software** to enable the function is required.
- The main stream is usually for recording and live view with good bandwidth, and the sub-stream can be used for live view when the bandwidth is limited.
- You can customize the following parameters for the selected stream type.

- Video Type:

Select the stream type to video stream, or video & audio composite stream. The audio signal will be recorded only when the **Video Type** is **Video & Audio**.

- Resolution:

Select the resolution of the video output.

- Bitrate Type:

Select the bitrate type to constant or variable.

- Video Quality:

When bitrate type is selected as Variable, 6 levels of video quality are selectable.

- Frame Rate:

Set the frame rate. The frame rate is to describe the frequency at which the video stream is updated and it is measured by frames per second (fps). A higher frame rate is advantageous when there is movement in the video stream, as it maintains image quality throughout.

- Max. Bitrate:

Set the max. bitrate from 32 to 16384 Kbps. The higher value corresponds to the higher video quality, but the better bandwidth is required.

 **Note**

The maximum limit of the max. bitrate value varies according to different camera platforms. For certain cameras, the maximum limit is 8192 Kbps or 12288 Kbps.

- Video Encoding:

The camera supports multiple video encodings types, such as H.264, H.265, and MJPEG. Supported encoding type for different stream types may differ. H.265 is a new encoding technology. Compared with H.264, it reduces the transmission bitrate under the same resolution, frame rate and image quality.

 **Note**

Selectable video encoding types may vary according to different camera modes.

- H.264+ and H.265+:

- H.264+: If you set the main stream as the stream type, and H.264 as the video encoding, you can see H.264+ available. H.264+ is an improved compression coding technology based on H.264. By enabling H.264+, users can estimate the HDD consumption by its maximum average bitrate. Compared to H.264, H.264+ reduces storage by up to 50% with the same maximum bitrate in most scenes.
- H.265+: If you set the main stream as the stream type, and H.265 as the video encoding, you can see H.265+ available. H.265+ is an improved compression coding technology based on H.265. By enabling H.265+, users can estimate the HDD consumption by its

maximum average bitrate. Compared to H.265, H.265+ reduces storage by up to 50% with the same maximum bitrate in most scenes.

You need to reboot the camera if you want to turn on or turn off the H.264+/H.265+. If you switch from H.264+ to H.265+ directly, and vice versa, a reboot is not required by the system.

 **Note**

- Upgrade your video player to the latest version if live view or playback does not work properly due to compatibility.
 - With H.264+/H.265+ enabled, the parameters such as profile, I frame interval, video quality, and SVC are greyed out.
 - With H.264+/H.265+ enabled, some functions are not supported. For those functions, corresponding interfaces will be hidden.
 - H.264+/H.265+ can spontaneously adjust the bitrate distribution according the requirements of the actual scene in order to realize the set maximum average bitrate in the long term. The camera needs at least 24 hours to adapt to a fixed monitoring scene.
-

● **Max. Average Bitrate:**

When you set a maximum bitrate, its corresponding recommended maximum average bitrate will be shown in the Max. Average Bitrate box. You can also set the maximum average bitrate manually from 32 Kbps to the value of the set maximum bitrate.

● **Profile:**

When you select H.264 or H.265 as video encoding, you can set the profile. Selectable profiles vary according to camera models.

● **I Frame Interval:**

Set I Frame Interval from 1 to 400.

● **SVC:**

Scalable Video Coding is an extension of the H.264/AVC and H.265 standard. Select OFF/ON to disable/enable the SVC function. Select Auto and the device will automatically extract frames from the original video when the network bandwidth is insufficient.

● **Smoothing:**

It refers to the smoothness of the stream. The higher value of the smoothing is, the better fluency of the stream will be, though, the video quality may not be so satisfactory. The lower value of the smoothing is, the higher quality of the stream will be, though it may appear not fluent.

Step 3 Click **Save** to save the settings.

 **Note**

The video parameters vary according to different camera models. Refer to the actual display page for camera functions.

6.2 ROI Encoding

Purpose:

ROI (Region of Interest) encoding helps to discriminate the ROI and background information in video compression, which means, the technology assigns more encoding resource to the region of interest, thus to increase the quality of the ROI whereas the background information is less focused.

 **Note**

ROI function varies according to different camera models.

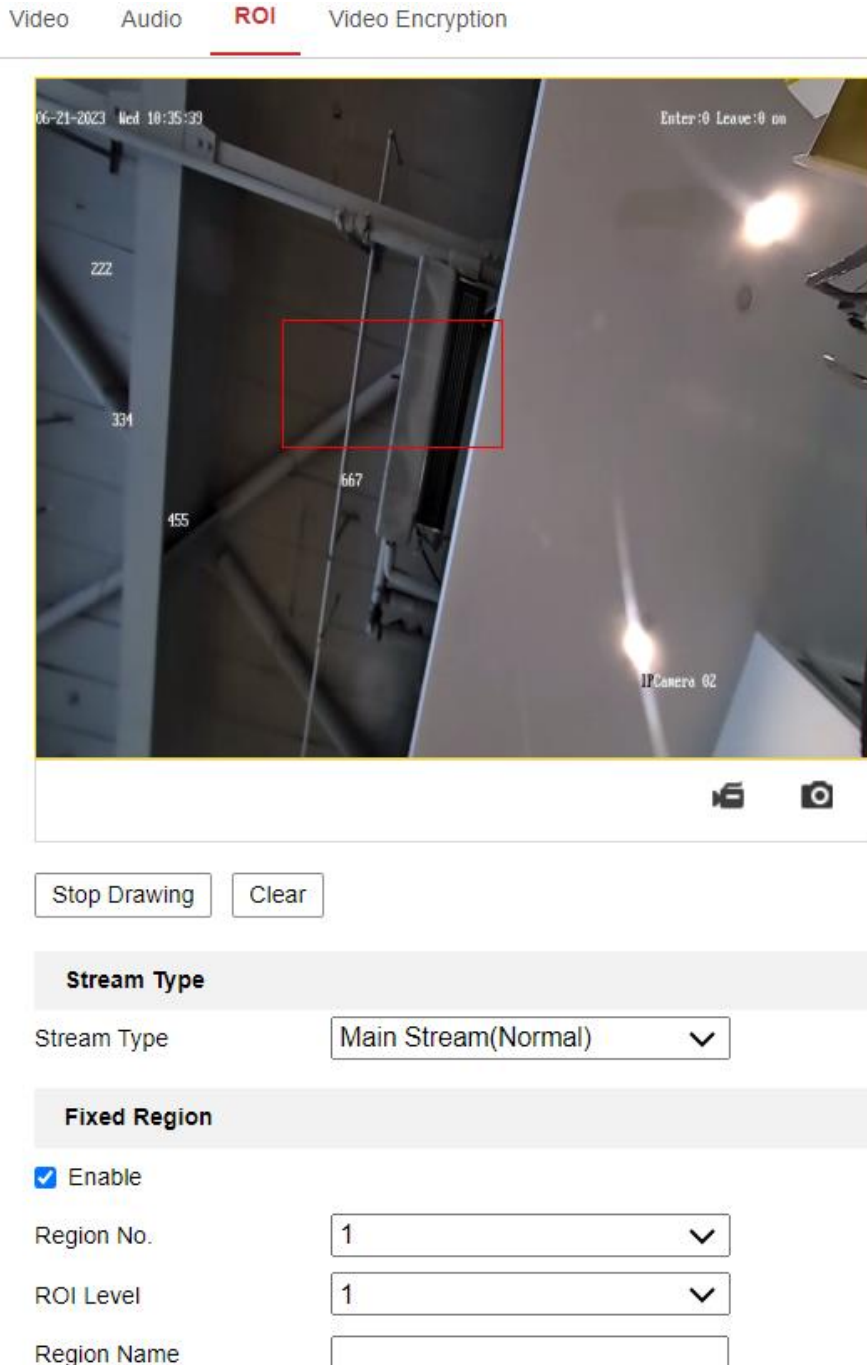

Figure 6-2 Region of Interest Settings

Step 2 Go to **Configuration > Video/Audio > ROI**.

Step 3 Select the Stream Type for ROI encoding.

Step 4 Check the checkbox of Enable under Fixed Region item.

Step 5 Set Fixed Region for ROI.

- 1) Select the Region No. from the drop-down list.
- 2) Check the **Enable** checkbox to enable ROI function for the chosen region.

- 3) Click **Drawing**. Click and drag the mouse on the view screen to draw a red rectangle as the ROI region. You can click **Clear** to cancel former drawing. Click **Stop Drawing** when you finish.
- 4) Select the ROI level.
- 5) Enter a region name for the chosen region.
- 6) Click **Save** the save the settings of ROI settings for chosen fixed region.
- 7) Repeat steps (1) to (6) to setup other fixed regions.

Step 6 Click **Save** to save the settings.

ROI level means the image quality enhancing level. The larger the value is, the better the image quality would be.

6.3 Video Encryption

Purpose:

To set up password protection for the camera video. To enable this function, go to 6.1 Video to set **Video Encryption** as ON.

Chapter 7 Image Settings

Purpose:

Follow the instructions in this chapter to configure the image parameters, including display settings, OSD settings, privacy mask, and picture overlay.

7.1 Display Settings

Purpose:

Configure the image adjustment, exposure settings, day/night switch, backlight settings, white balance, image enhancement, video adjustment, and other parameters in display settings.

The display parameters vary according to the different camera models. Please refer to the actual interface for details.

7.1.1 Day/Night Auto-Switch

Step 1 Go to **Configuration > Image > Display Settings**.

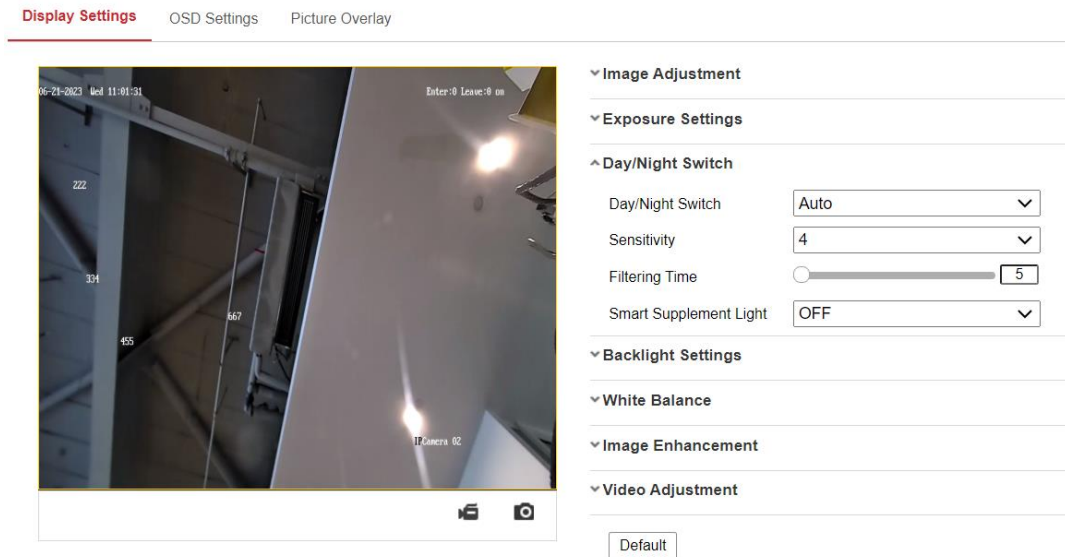

Figure 7-1 Display Settings of Day/Night Auto-Switch

Step 2 Set the image parameters of the camera.

In order to guarantee the image quality in different illumination, it provides two sets of parameters for users to configure.

● Image Adjustment

- **Brightness** describes how bright the image is, which ranges from 1 to 100.
- **Contrast** describes the contrast of the image, which ranges from 1 to 100.
- **Saturation** describes how colorful of the image is, which ranges from 1 to 100.
- **Sharpness** describes the edge contrast of the image, which ranges from 1 to 100.

● Exposure Settings

- If the camera is equipped with the fixed lens, only **Manual** is selectable, and the iris mode is not configurable.
- If **Auto** is selected, you can set the auto iris level from 0 to 100.
- The **Exposure Time** refers to the electronic shutter time, which ranges from 1 to 1/100, 000 s. Adjust it according to the actual luminance condition.
- **Gain** of image can also be manually configured from 0 to 100. The bigger the value is, the brighter would the image be, and the noise would also be amplified to a larger extent.

Figure 7-2 Exposure Settings

● Focus

For camera support motor-driven lens, you can set the focus mode as Auto, Manual or Semi-auto.

- **Auto:** Camera focus is adjusted automatically according to the actual monitoring scenario.
- **Manual:** You can control the lens by adjusting the zoom, focus, lens initialization, and auxiliary focus manually.
- **Semi-Auto:** Camera will focus automatically when you adjust the zoom parameters.

● Day/Night Switch

Select the Day/Night Switch mode according to different monitoring demand.

Day, Night, Auto, Scheduled-Switch, and Triggered by alarm input are selectable for day/night switch.

^ **Day/Night Switch**

Day/Night Switch	Auto	▼
Sensitivity	4	▼
Filtering Time	<input type="range" value="5"/>	5
Smart Supplement Light	OFF	▼

Figure 7-3 Day/Night Switch

- **Day:** the camera stays at day mode.
 - **Night:** the camera stays at night mode.
 - **Auto:** the camera switches between the day mode and the night mode according to the illumination automatically. The sensitivity ranges from 0 to 7, the higher the value is, the easier the mode switches. The **Filtering Time** refers to the interval time between the day/night switch. You can set it from 5 s to 120 s.
 - **Scheduled-Switch:** Set the start time and the end time to define the duration for day/night mode.
 - **Triggered by alarm input:** The switch is triggered by alarm input. You can set the triggered mode to day or night.
 - **Smart Supplement Light:** Set the supplement light as ON, and Auto and Manual are selectable for light mode.
 - Select **Auto**, and the supplement light changes according to the actual luminance. E.g., if the current scene is bright enough, then the supplement light adjusts itself to lower power; and if the scene is not bright enough, the light adjusts itself to higher power.
 - Select **Manual**, and you can adjust the supplement by adjusting the distance. E.g., if the object is near the camera, the device adjusts the supplement light to lower power, and the light is in higher power if the object is far away.
- **Backlight Settings**
 - **BLC Area:** If you focus on an object against strong backlight, the object will be too dark to be seen clearly. BLC compensates light to the object in the front to make it clear. OFF, Up, Down, Left, Right, Center, Auto, and Custom are selectable.

 **Note**

If BLC mode is set as Custom, you can draw a red rectangle on the live view image as the BLC area.

- **WDR:** Wide Dynamic Range can be used when there is a high contrast of the bright area and the dark area of the scene.
- **HLC:** High Light Compression function can be used when there are strong lights in the scene affecting the image quality.

- **White Balance**

White balance is the white rendition function of the camera used to adjust the color temperature according to the environment.

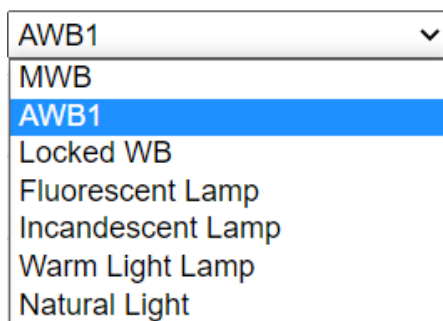

Figure 7-4 White Balance

- **Image Enhancement**

- **Digital Noise Reduction:** DNR reduces the noise in the video stream. OFF, Normal and Expert are selectable. Set the DNR level from 0 to 100 in Normal Mode. Set the DNR level from both space DNR level [0-100] and time DNR level [0-100] in Expert Mode.
- **Defog Mode:** You can enable the defog function when the environment is foggy and the image is misty. It enhances the subtle details so that the image appears clearer.
- **EIS (Electrical Image Stabilizer):** EIS reduces the effects of vibration in a video.
- **Grey Scale:** You can choose the range of the grey scale as [0-255] or [16-235].

- **Video Adjustment**

- **Mirror:** It mirrors the image so you can see it inversed. Left/Right, Up/Down, Center, and OFF are selectable.
- **Rotate:** To make a complete use of the 16:9 aspect ratio, you can enable the rotate function when you use the camera in a narrow view scene.

- When installing, turn the camera to the 90 degrees or rotate the 3-axis lens to 90 degrees, and set the rotate mode as on, you will get a normal view of the scene with 9:16 aspect ratio to ignore the needless information such as the wall, and get more meaningful information of the scene.
- **Scene Mode:** Choose the scene as indoor or outdoor according to the real environment.
- **Video Standard:** 50 Hz and 60 Hz are selectable. Choose according to the different video standards; normally 50 Hz for PAL standard and 60 Hz for NTSC standard.
- **Lens Distortion Correction:** For cameras equipped with motor-driven lens, image may appear distorted to some extent. Turn on this function to correct the distortion.

● Others

Some camera models support CVBS, SDI, or HDMI output. Set the local output ON or OFF according to the actual device.

7.1.2 Day/Night Scheduled-Switch

Day/Night scheduled-switch configuration interface enables you to set the camera parameters for day and night separately, guaranteeing the image quality in different illumination.

▼ **Image Adjustment**

▼ **Exposure Settings**

^ **Day/Night Switch**

Day/Night Switch	<input style="width: 100%; border: 1px solid #ccc;" type="text" value="Scheduled-Switch"/>
Start Time	<input style="width: 100%; border: 1px solid #ccc;" type="text" value="06:00:00"/>
End Time	<input style="width: 100%; border: 1px solid #ccc;" type="text" value="18:00:00"/>
Smart Supplement Light	<input style="width: 100%; border: 1px solid #ccc;" type="text" value="OFF"/>

▼ **Backlight Settings**

▼ **White Balance**

▼ **Image Enhancement**

▼ **Video Adjustment**

Figure 7-5 Day/Night Scheduled-Switch Configuration Interface

Step 1 Click the calendar icon to select the start time and the end time of the switch.

 **Note**

- The start time and end time refer to the valid time for day mode.
 - The time period can start and end on two days in a row. For example, if you set start time as 10:00 and end time as 1:00, the day mode will be activated at 10 o'clock in the morning and stopped at 1 o'clock early in the next morning.
-

Step 2 Click Common tab to configure the common parameters applicable to the day mode and night mode.

 **Note**

For the detailed information of each parameter, please refer to *Section 9.1.1 Day/Night Auto-Switch*.

Step 3 Click Day tab to configure the parameters applicable for day mode.

Step 4 Click Night tab to configure the parameters applicable for night mode.

 **Note**

The settings saved automatically if any parameter is changed.

7.2 OSD Settings

Purpose:

You can customize the camera name, time/date format, display mode, and OSD size displayed on the live view.

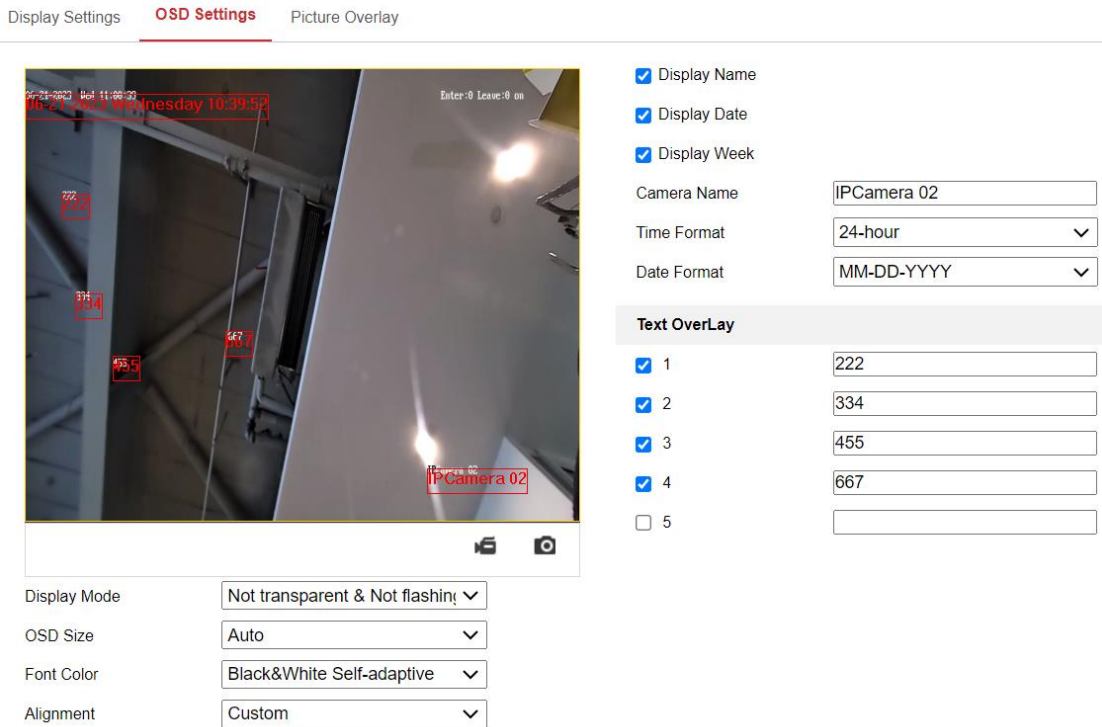

Figure 7-6 OSD Settings

Step 2 Go to **Configuration > Image > OSD Settings**.

Step 3 Check the corresponding checkbox to select the display of camera name, date or week if required.

Step 4 Edit the camera name in the text field of Camera Name.

Step 5 Select from the drop-down list to set the time format and date format.

Step 6 Select from the drop-down list to set the time format, date format, display mode, OSD size and OSD color.

Step 7 Configure the text overlay settings.

- 1) Check the checkbox in front of the textbox to enable the on-screen display.
- 2) Input the characters in the textbox.

 **Note**

Up to 4 text overlays are configurable.

Step 8 Adjust the position and alignment of text frames.

Left align, right align and custom are selectable. If you select custom, you can use the mouse to click and drag text frames in the live view window to adjust their positions.

 **Note**

The alignment adjustment is only applicable to Text Overlay items.

Step 9 Click **Save** to save the settings.

7.3 Picture Overlay

Purpose:

Picture overlay enables you to overlay a picture on the image. This function enables a certain enterprise or users to overlay their logo on the image.

Step 1 Go to **Configuration > Image > Picture Overlay**.

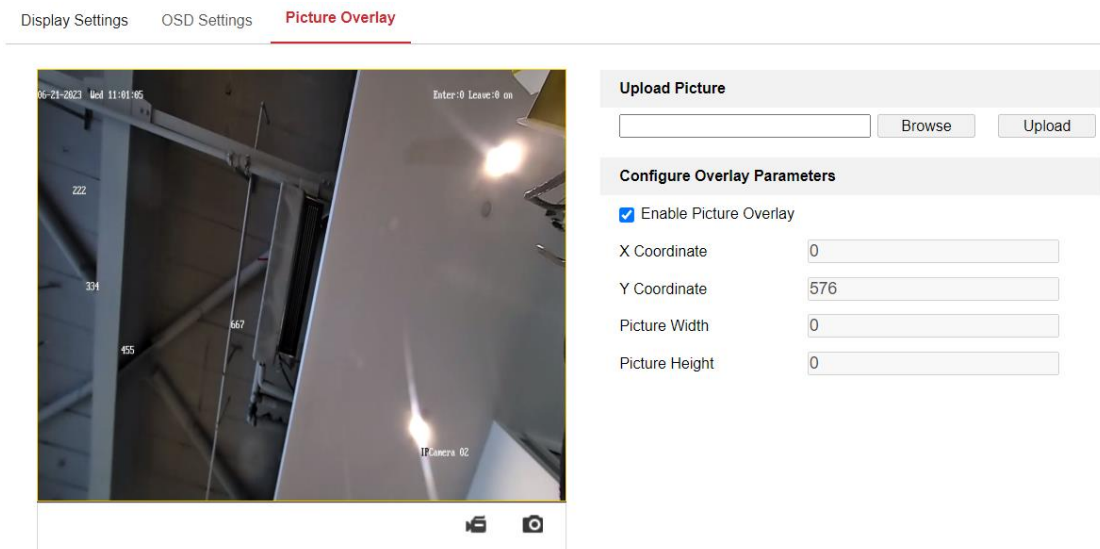

Figure 7-7 Picture Overlay

Step 2 Click **Browse** to select a picture.

Step 3 Click **Upload** to upload it.

Step 4 Check **Enable Picture Overlay** checkbox to enable the function. Uncheck this checkbox to disable picture overlay.

Step 5 Drag the red box to the desired place.

Step 6 Click **Save** and the picture will appear in the red box.

Step 7 To change the position of the picture overlay, upload the picture again and the repeat the above procedures.

Note

The picture must be in RGB24 bmp format and the maximum picture size is 128*128.

Chapter 8 Event Settings

This section explains how to configure the network camera to respond to alarm events, including basic event and smart event.

You can configure the basic events by following the instructions in this section, including video tampering and exception, etc. These events can trigger the linkage methods, such as Notify Monitoring Center, Send Email, etc.

Note

Check the checkbox of Notify Monitoring Center if you want the alarm information to be pushed to PC or mobile client software as soon as the alarm is triggered.

8.1 Video Tampering Alarm

Purpose:

You can configure the camera to trigger the alarm when the lens is covered and take certain alarm response actions.

Detection area for this alarm is the whole screen.

Step 1 Go to **Configuration > Event > Basic Event > Video Tampering**.

Step 2 Check the Enable checkbox to enable the video tampering detection.

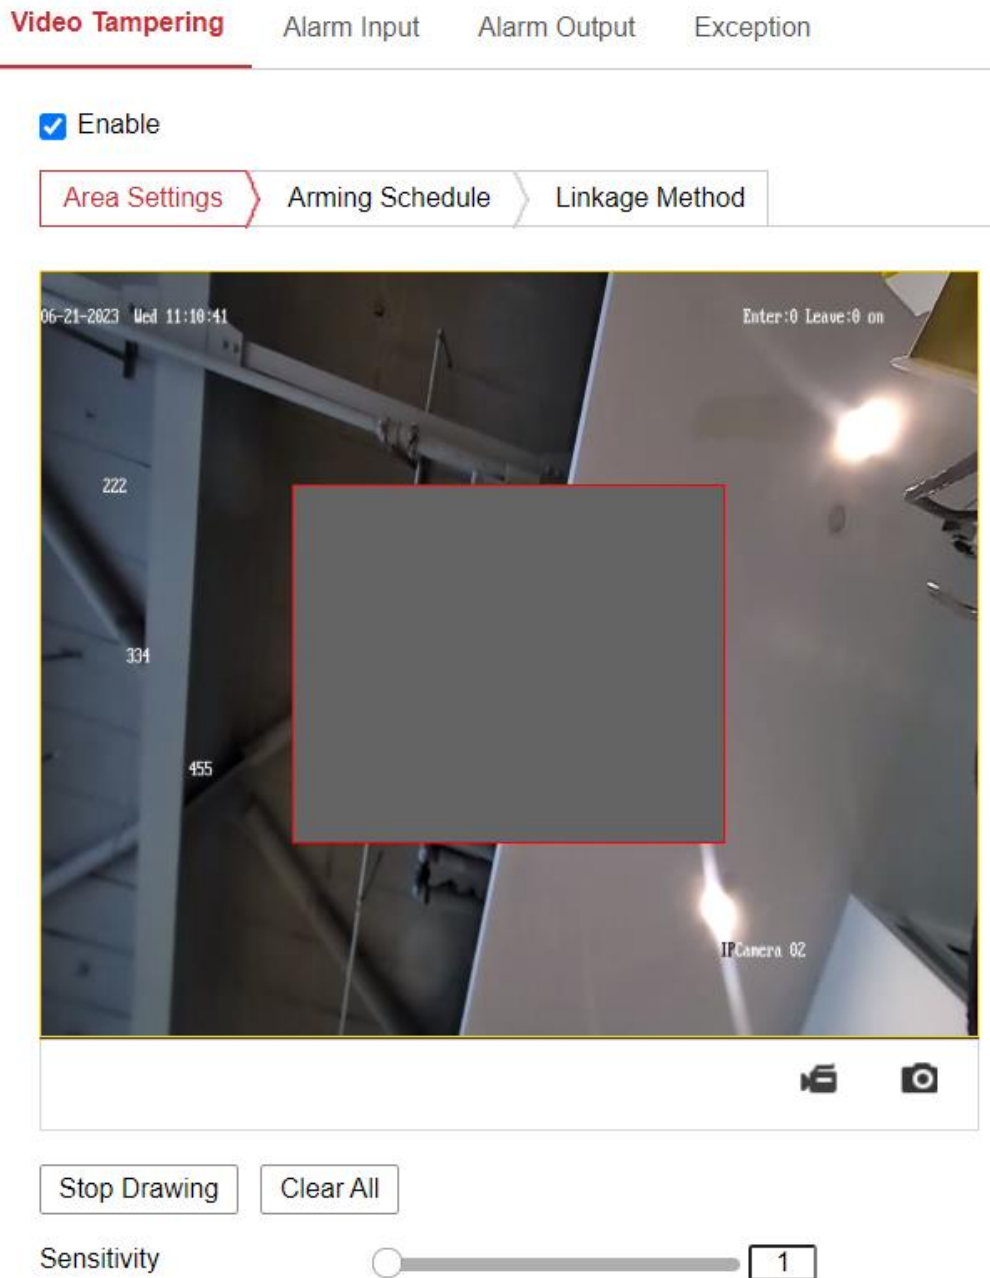

Figure 8-1 Video Tampering Detection

Step 3 Click **Draw Area**. Click and drag the mouse on the live video to draw a video tampering detection area. Click **Stop Drawing** to finish drawing one area.

Step 4 (Optional) Click **Clear All** to clear all of the areas.

Step 5 (Optional) Move the slider to set the sensitivity of the detection.

Step 6 Click **Save** to save the settings.

8.1.1 Task 1: Set the Arming Schedule

Figure 8-2 Arming Schedule

Step 2 Click **Arming Schedule** to edit the arming schedule.

Step 3 Click on the time bar and drag the mouse to select the time period.

Figure 8-3 Arming Schedule

 **Note**

Click on the selected time period, you can adjust the time period to the desired time by either moving the time bar or input the exact time period.

Step 4 (Optional) Click Delete to delete the current arming schedule, or click Save to save the settings.

Step 5 Move the mouse to the end of each day, a copy dialogue box pops up, and you can copy the current settings to other days.

Step 6 Click **Save** to save the settings.

 **Note**

The time of each period can't be overlapped. Up to 8 periods can be configured for each day.

8.1.2 Task 2: Set the Linkage Method

Check the checkbox to select the linkage method. Send Email, Notify Monitoring Center, Upload to FTP/Memory Card/NAS and Trigger Recording are selectable. You can specify the linkage method when an event occurs.

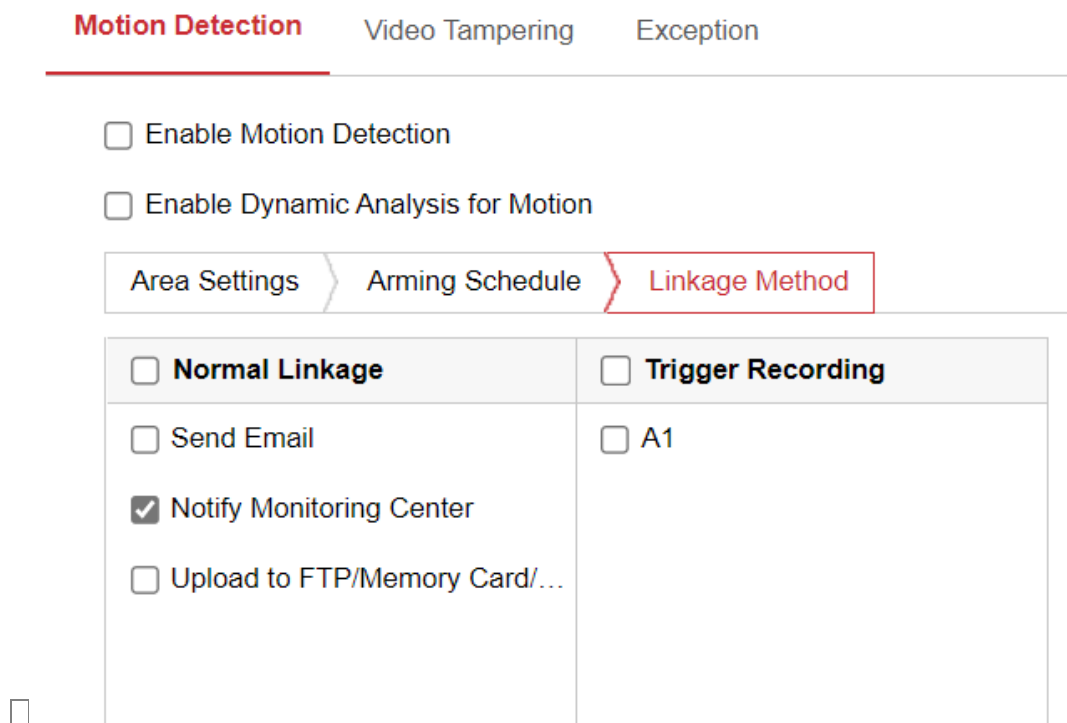

Figure 8-4 Linkage Method

 **Note**

The linkage methods vary according to the different camera models.

- **Notify Monitoring Center**

Send an exception or alarm signal to remote management software when an event occurs.

- **Send Email**

Send an email with alarm information to a user or users when an event occurs.

Note

To send the Email when an event occurs, please refer to *Section 7.2.3* to complete Email setup in advance.

- Upload to FTP/Memory Card/NAS

Capture the image when an alarm is triggered and upload the picture to a FTP server.

Note

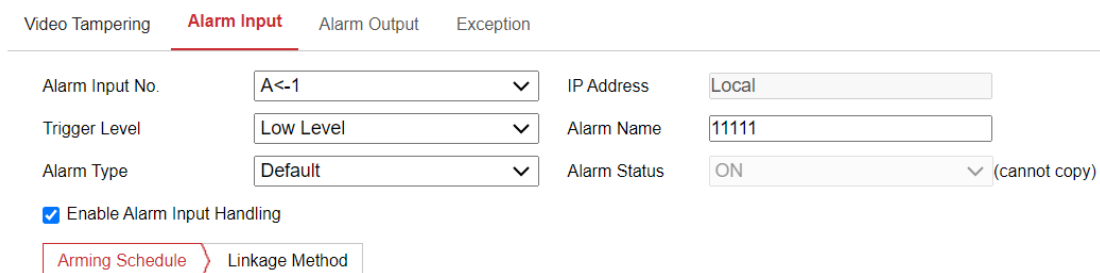

- Set the FTP address and the remote FTP server first. Refer to 5.2.2 FTP for detailed information.
- Go to **Configuration > Storage > Schedule Settings> Capture > Capture Parameters** page, and set the capture interval and capture number.
- The captured image can also be uploaded to the available SD card or network disk.

8.2 Alarm Input

When the alarm input of the camera is connected to external devices, then the triggered signal from these devices can trigger the camera to conduct linkage actions.

Step 1 Go to **Configuration > Event > Basic Event > Alarm Input**.

Step 2 Check the **Enable Alarm Input Handling** checkbox.

Video Tampering	Alarm Input	Alarm Output	Exception
Alarm Input No.	A<-1	IP Address	Local
Trigger Level	Low Level	Alarm Name	11111
Alarm Type	Default	Alarm Status	ON (cannot copy)
<input checked="" type="checkbox"/> Enable Alarm Input Handling			
Arming Schedule		Linkage Method	

Figure 8-5 Alarm Output

Step 3 Choose **Alarm Input No.** (2 available), **Trigger Level** (High/Low level) and the **Alarm Type** (only support default).

Step 4 Enter the **Alarm Name**.

Step 5 For **Alarming Schedule** and **Linkage Method**, refer to *8.1.1 Task 1: Set the Arming Schedule* and *8.1.2 Task 2: Set the Linkage Method*.

Step 6 Click **Copy to** to copy the current setting to another alarm input number.

Step 7 Click **Save**.

8.3 Alarm Output

When the alarm output of the camera is connected to external devices, then the triggered signal from the camera can trigger actions on the external devices.

Step 1 Go to **Configuration > Event > Basic Event > Alarm Output**.

Video Tampering	Alarm Input	Alarm Output	Exception
Alarm Output No.	A->1	IP Address	Local
Default Status	Low Level	Triggering Status	Pulse
Delay	5s	Alarm Name	test
Alarm Status	OFF		(cannot copy)

Figure 8-6 Alarm Output

Step 2 Choose **Alarm Output No.** (2 available), **Trigger Level** (default to Low level) and the **Alarm Type** (only support default).

Step 3 Enter the **Alarm Name**.

Step 4 Set the **Delay** value for the duration of alarm output.

Step 5 For **Alarming Schedule**, refer to *8.1.1 Task 1: Set the Arming Schedule*.

Step 6 Click **Copy to** to copy the current setting to another alarm output number.

Step 7 Optional: Click **Manual Alarm** to test the alarm output number.

Step 8 Click **Save**.

8.4 Exception

The exception type can be HDD full, HDD error and illegal login to the cameras.

Exception Type	HDD Full
<input type="checkbox"/> Normal Linkage	<input type="checkbox"/> Trigger Alarm Output
<input type="checkbox"/> Send Email	<input type="checkbox"/> A->1
<input type="checkbox"/> Notify Monitoring Center	<input type="checkbox"/> A->2

Figure 8-7 Exception

Step 2 Go to **Configuration > Event > Basic Event > Exception**.

Step 3 Check the checkbox to set the actions taken for the Exception alarm. You can set the linkage action to send email or notify monitoring center, or trigger alarm output no.

Step 4 Click **Save** to save the settings.

Chapter 9 Storage Settings

Before you start:

To configure record settings, make sure that you have the network storage device or local storage device configured.

9.1 Record Schedule

Purpose:

There are 2 kinds of recording for the cameras: manual recording and scheduled recording. In this section, you can follow the instructions to configure the scheduled recording. By default, the record files of scheduled recording are stored in the local storage or in the network disk.

Step 1 Go to **Configuration > Storage > Schedule Settings > Record Schedule**.

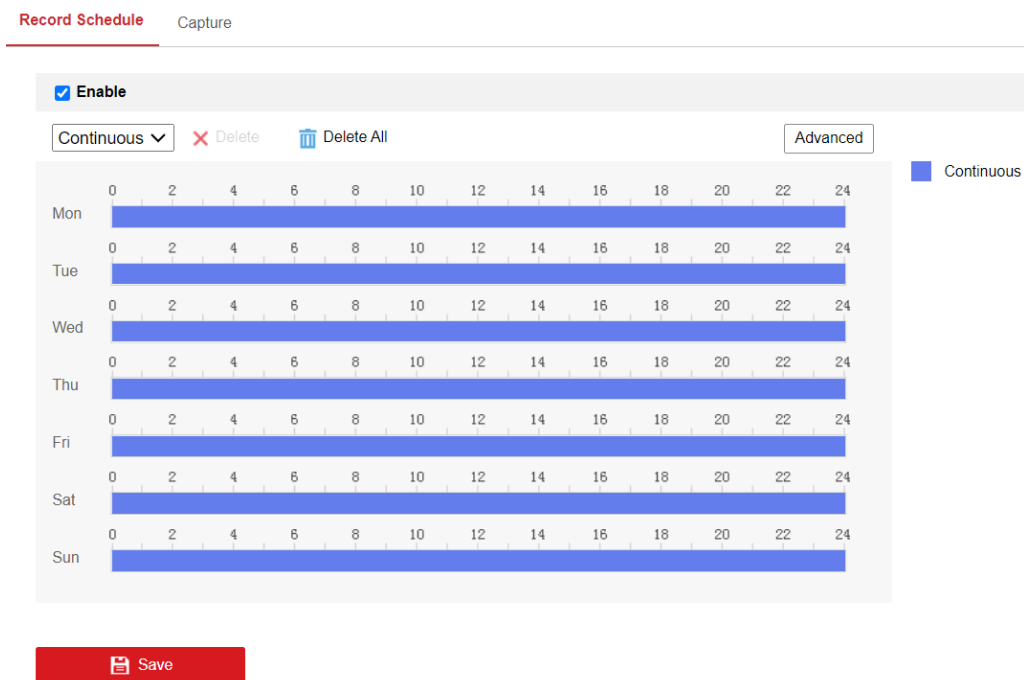

Figure 9-1 Recording Schedule Interface

Step 2 Check the checkbox of **Enable** to enable scheduled recording.

Step 3 Click **Advanced** to set the camera record parameters.

The screenshot shows a dialog box titled "Advanced" with a close button (X) in the top right corner. It contains three configuration items, each with a dropdown menu:

- Pre-record: 5s
- Post-record: 5s
- Stream Type: Main Stream(Normal)

At the bottom right, there are two buttons: "OK" and "Cancel".

Figure 9-2 Record Parameters

- **Pre-record:** The time you set to start recording before the scheduled time or the event. For example, if an alarm triggers recording at 10:00, and the pre-record time is set as 5 seconds, the camera starts to record at 9:59:55.

The Pre-record time can be configured as No Pre-record, 5 s, 10 s, 15 s, 20 s, 25 s, 30 s or not limited.

- **Post-record:** The time you set to stop recording after the scheduled time or the event. For example, if an alarm triggered recording ends at 11:00, and the post-record time is set as 5 seconds, the camera records until 11:00:05.

The Post-record time can be configured as 5 s, 10 s, 30 s, 1 min, 2 min, 5 min or 10 min.

- **Stream Type:** Select the stream type for recording.

Note

The record parameter configurations vary depending on the camera model.

Step 4 Select a **Record Type**. Only Continuous is supported.

- Continuous

If you select **Continuous**, the video will be recorded automatically according to the time of the schedule.

Step 5 Select the record type, and click-and-drag the mouse on the time bar to set the record schedule.

Step 6 Click **Save** to save the settings.

9.2 Capture Schedule

Purpose:

You can configure the scheduled snapshot and event-triggered snapshot. The captured picture can be stored in the local storage or network storage.

Step 1 Go to **Configuration > Storage > Storage Settings > Capture**.

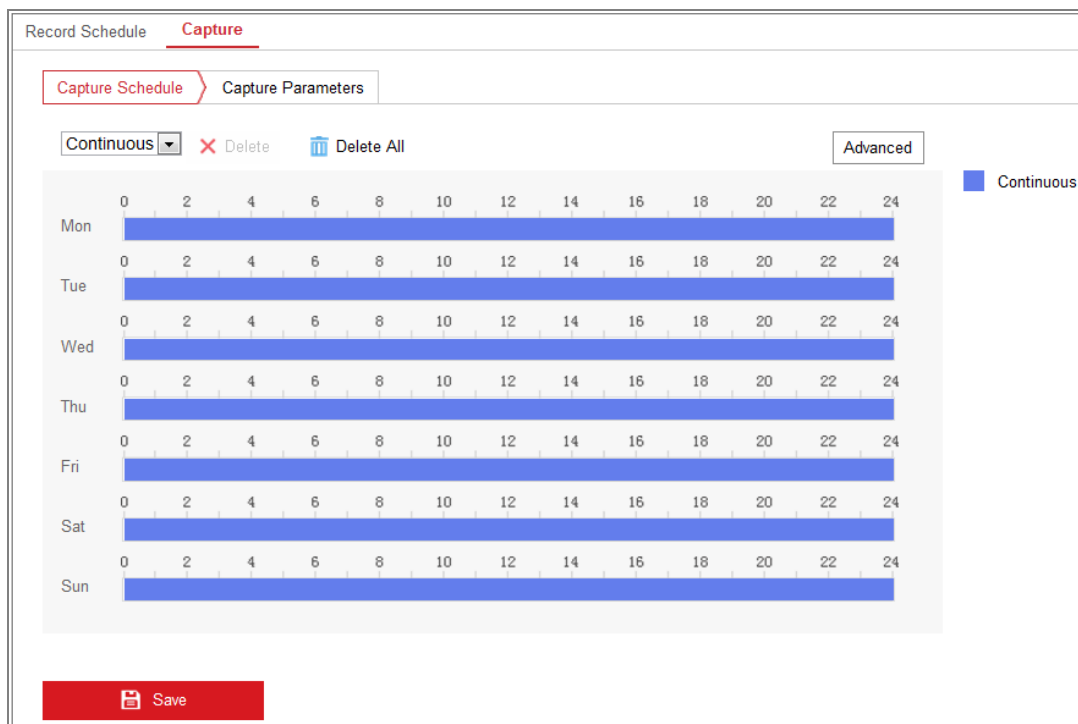

Figure 9-3 Capture Configuration

Step 2 Go to Capture Schedule tab to configure the capture schedule by click-and-drag the mouse on the time bar. You can copy the record schedule to other days by clicking the green copy icon on the right of each time bar.

Step 3 Click **Advanced** to select stream type. The camera only supports main stream.

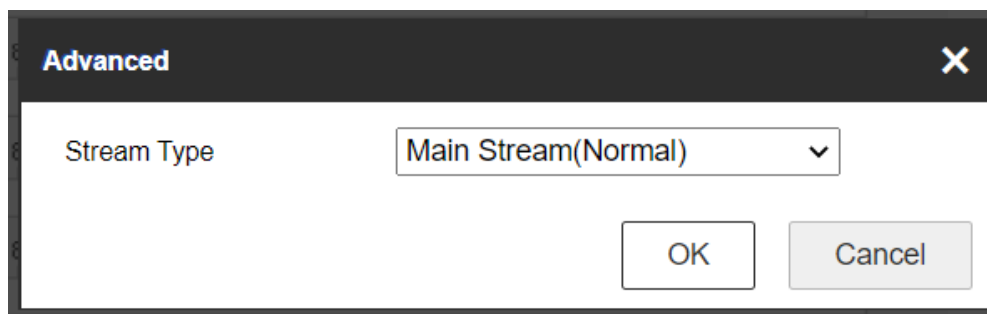

Figure 9-4 Advanced Setting of Capture Schedule

Step 4 Click **Save** to save the settings.

Step 5 Go to Capture Parameters tab to configure the capture parameters.

- 1) Check the **Enable Timing Snapshot** checkbox to enable continuous snapshot.
- 2) Select the picture format, resolution, and quality.

Record Schedule **Capture**

Capture Schedule > Capture Parameters

Timing

Enable Timing Snapshot

Format: JPEG

Resolution: 1920*1080

Quality: High

Interval: 1000 milliseconds

Save

Figure 9-5 Set Capture Parameters

Step 6 Set the time interval between two snapshots.

Step 7 Click **Save** to save the settings.

9.3 Storage Management

Before you start:

The network disk should be available within the network and properly configured to store the recorded files, log files, pictures, etc.

Steps:

Step 1 Go to **Configuration > Storage > Storage Management > HDD Management**, in which you can view the capacity, free space, status, type and property of the disk.

HDD Management

HDD Management								Format
<input type="checkbox"/>	HDD No.	Capacity	Free space	Status	Type	Property	Progress	

Note: Currently, the remaining space is available to customers. Video and pictures have been reserved, and no statistics will be made.

Figure 9-6 Storage Management Interface

Step 2 If the status of the disk is **Uninitialized**, check the corresponding checkbox to select the disk and click **Format** to start initializing the disk.

Step 3 When the initialization completed, the status of disk will become **Normal**.

HDD Management							Set	Format
<input checked="" type="checkbox"/>	HDD No.	Capacity	Free space	Status	Type	Property	Progress	
<input checked="" type="checkbox"/>	9	20.00GB	0.00GB	Formatting	NAS	R/W		

Figure 9-7 View Disk Status

Step 4 Define the quota for record and pictures.

- 1) Input the quota percentage for picture and for record.
- 2) Click **Save** and refresh the browser page to activate the settings.

Quota

Max. Picture Capacity

Save

Figure 9-8 Quota Settings

9.4 Advanced Setting

You can choose whether to enable print log.

Chapter 10 People Counting

The people counting function is to calculate the number of people crossing the detection line in the camera picture. The way of crossing can be either entering or leaving. To use this function, you need to set IPC parameters, pedal area, counting area, detection line and rule area. The camera also supports shielding area, data upload, image overlay and calculate children separately.

10.1 Rule Setting

10.1.1 Rule setting

The people counting function requires the drawing of rule area and the set of rules. For accounting accuracy, you also need to calibrate the camera by entering the height of the lens and its angle.

Step 1 Go to **VCA > Rule**.

Rule Reverse Counting Alarm

Enable People Counting

Rule Arming Schedule Linkage Method

Calibration Mode Manual

IP Camera Parameters Lens Height from Entry/Exit Area: 250cm Tilt Angle: 90° Heel Angle: 0°

Calibration

Set the lens height (vertical distance from lens to the first step of entry/exit area) before clicking the button.

Save

Figure 10-1 VCA Rule

Step 2 Check **Enable People Counting**.

Step 3 Click **Calibration** and enter the lens height, tilt angle and heel angle. You can also do so by sliding the block.

Step 4 Click  to draw the rule area within the blue square (). The people counting rules will only work within this area. Support up to 10 points to draw a polygon rule area. You can adjust the position of the area by click and drag the polygon. Currently, the camera supports only one rule area.

Step 5 Click  to draw the detection line (). You can adjust the position of the area by click and drag the detection line.

Step 6 Click  to switch the arrow direction on the detection line. Inside the rule area, crossing the detection line along the arrow means entering the vehicle.

Step 7 Click  to draw the pedal area.

Step 8 For **Alarming Schedule** and **Linkage Method**, refer to *8.1.1 Task 1: Set the Arming Schedule* and *8.1.2 Task 2: Set the Linkage Method*.

Step 9 Click **Save** to save the settings.

10.1.2 Reverse Crossing Alarm

The camera support sending alarm for reverse crossing the detection line. For instance, boarding the bus from the door that is used for unloading the passengers.

Step 1 Go to **VCA > Reverse Counting Alarm**.

Step 2 Check **Enable Reverse Entering Alarm**.

Step 3 For **Alarming Schedule** and **Linkage Method**, refer to *8.1.1 Task 1: Set the Arming Schedule* and *8.1.2 Task 2: Set the Linkage Method*.

Step 4 Click **Save** to save the settings.

10.2 Shield Region

You can draw shield regions that needs block the rules, you can draw the shield region.

Step 1 Go to **VCA > Shield Region**.

Shield Region

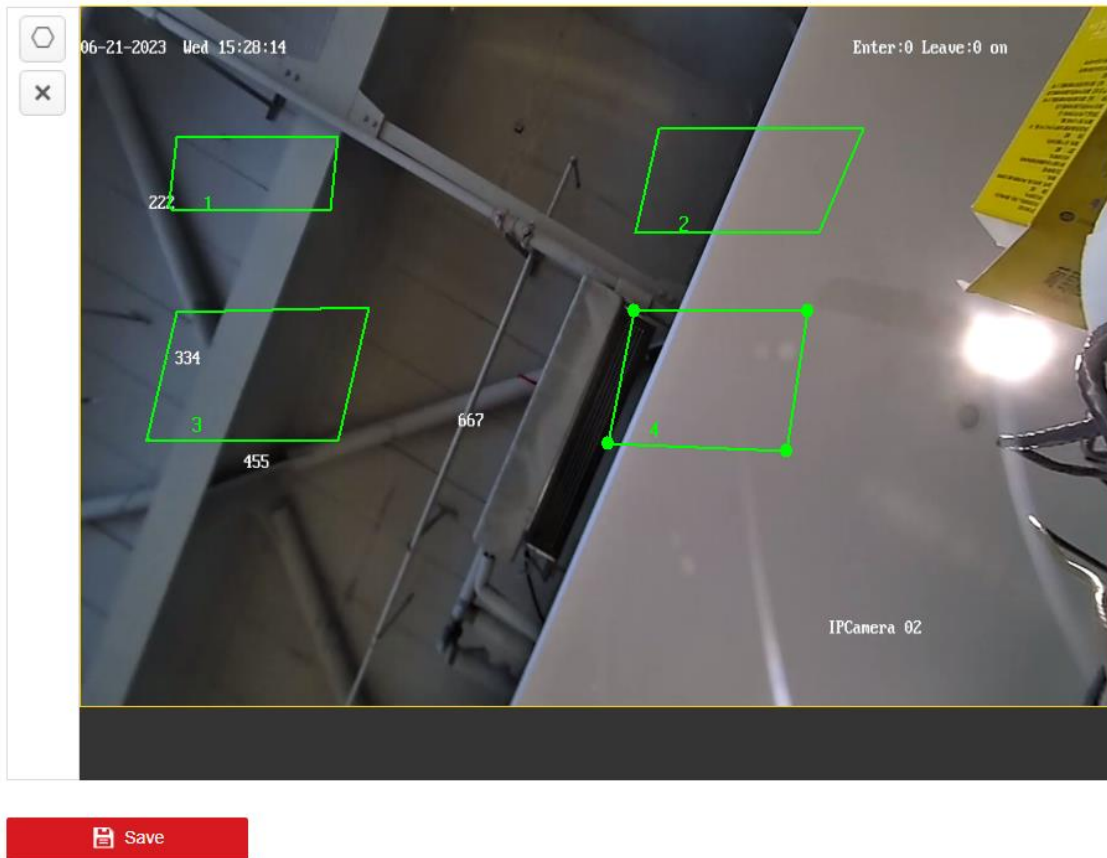

Figure 10-2 Shield Region

Step 2 Click  to draw a shield region. You can repeat this process to draw up to 4 areas.

Step 3 If you want to draw anew, you can click  to clear all the shield regions.

Step 4 Click **Save** to save the settings.

10.3 Data Uploading

The camera supports data uploading triggered by alarm input or NVR input.

Step 1 Go to **VCA > Data Uploading**.

Data Uploading

Trigger Counting Mode

Data Type

Real-Time Upload Data ON OFF

Data Statistics Cycle

Figure 10-3 Data Uploading

Step 2 Choose the trigger counting mode as triggered by alarm input or NVR. If you choose “None”, then the uploading will not require any other requirement.

Step 3 Choose whether to enable real-time data uploading and the time interval for data statistics.

Step 4 Click **Save** to save the settings.

10.4 Overlay and Capture

The stream and image of the camera support of the VCA information and entering/leaving information of the passenger flow.

Step 1 Go to **VCA > Overlay & Capture**.

Overlay & Capture

Display on Stream

Display VCA Info. on Stream

Figure 10-4 Overlay and Capture

- Display on Stream

Display VCA information in the stream, including the target information and the rule information. (Without changing the original image)

- Display on Picture

Display the target information and the rule information on the capture.

- Snapshot Settings

You can choose whether to upload the capture with the background and the target. You can also choose the quality (Low, Medium, high) and resolution of the image (1440*900, 1920*1080).

- Flow Overlay

You can choose whether to display the statistics of the people entering, leaving separately, or the sum of both.

You can choose whether to display the number of adults or children separately, or the sum of both.

You can choose the time for daily reset by which the statistics will be deleted and the people counting will start again.

You can also reset the people counting statistics manually.

10.5 Advanced

You can view and set the people counting algorithm.

Step 1 Go to **VCA > Advanced**.

Advanced

People CountingVersion: V2.1.1build230612

Depth MapVersion: V2.1.1build230612

Enable Height Filter

Height: 120 cm

Enable Counting Children

Height: 140 cm

Target Detection Type: Detect based on depth map

Algorithm Validity: 50

Enable Pattern Counting Filtering

Motion Displacement: 35 cm

Dwell Time: s

Counting Status: Counting (2023-06-21 16:26:40)

Door Status: Open

Clear Storage Data: **Note: This action clears all counting data stored in the camera.**

One-touch Export: **Export the device hardware settings, installation settings, people counting settings, rule settings and advanced settings.**

Maintenance Mode: OFF

Figure 10-5 Advanced Setting

- Enable Height Filter

Only the target higher than the set value is considered valid target.

- Enable Counting Children

Only the target lower than the set value is considered children. When enabled, the OSD can be set to display either the number of the children or adults.

Contact the professionals if you need to set the filter parameters.

- Target Detection Type

Default: detect based on depth map mainly and tracking algorithm secondly.

Depth map: suitable for the head-shoulder feature indistinct scenario, wide passage scenario and the scenario in which the camera is installed over 6 m above ground.

Tracking algorithm: suitable for the scenario in which depth map is in error.

Mainly tracking algorithm, and depth map secondly: suitable for the standing in queue for a long time scenario.

- Algorithm Validity

The higher the validity is set, the less likely the camera will pick out the target yet accuracy of the target recognition will also increase.

- Motion Displacement

When the motion of the target is less than the set value, then the target will be filtered.

- Dwell Time

When the time of the target is less than the set value, then the target will be filtered.

- Counting and Door Status

Whether it is counting or whether the door is opening.

- Clear Storage Data

Clear all the people counting data in the camera.

- One-touch Export

Export all the rules and advanced settings.

- Maintenance Mode

Maintenance mode will distinguish the left eye image and the right eye image.

Chapter 11 Access to the Network Camera

Purpose:

This section explains how to connect the network camera to the WAN with a static IP or a dynamic IP.

11.1.1 Via Static IP Connection

Before you start:

Please apply a static IP from an ISP (Internet Service Provider). With the static IP address, you can connect the network camera via a router or connect it to the WAN directly.

Connecting the network camera via a router

Step 1 Connect the network camera to the router.

Step 2 Assign a LAN IP address, the subnet mask and the gateway. Refer to Section 5.1.1 TCP/IP for detailed IP address configuration of the network camera.

Step 3 Save the static IP in the router.

Step 4 Set port mapping, e.g., 80, 8000, and 554 ports. The steps for port mapping vary according to the different routers. Please call the router manufacturer for assistance with port mapping.

Refer to Appendix 2 for detailed information about port mapping.

Step 5 Visit the network camera through a web browser or the client software over the internet.

Figure 11-1 Accessing the Camera through Router with Static IP

Connecting the network camera with static IP directly

You can also save the static IP in the camera and directly connect it to the internet without using a router. Refer to Section 5.1.1 TCP/IP for detailed IP address configuration of the network camera.

Figure 11-2 Accessing the Camera with Static IP Directly

11.1.2 Via Dynamic IP Connection

Before you start:

Please apply a dynamic IP from an ISP. With the dynamic IP address, you can connect the network camera to a modem or a router.

Connecting the network camera via a router

Step 1 Connect the network camera to the router.

Step 2 In the camera, assign a LAN IP address, the subnet mask and the gateway. Refer to Section 2.1.2 for detailed IP address configuration of the network camera.

Step 3 Set port mapping. E.g. 80, 8000, and 554 ports. The steps for port mapping vary depending on different routers. Please call the router manufacturer for assistance with port mapping.

Note

Refer to Appendix 2 for detailed information about port mapping.

Step 4 Apply a domain name from a domain name provider.

Step 5 Configure the DDNS settings in the setting interface of the router.

Step 6 Visit the camera via the applied domain name.

Step 7 Connecting the network camera via a modem

Figure 11-3 Accessing the Camera with Dynamic IP

Chapter 12 Appendix

12.1 Appendix 1 SADP Software Introduction

- **Description of SADP**

SADP (Search Active Devices Protocol) is a kind of user-friendly and installation-free online device search tool. It searches the active online devices within your subnet and displays the information of the devices. You can also modify the basic network information of the devices using this software.

- **Search active devices online**

Step 1 Search online devices automatically

Step 2 After launch the SADP software, it automatically searches the online devices every 15 seconds from the subnet where your computer locates. It displays the total number and information of the searched devices in the Online Devices interface. Device information including the device type, IP address and port number, etc. will be displayed.

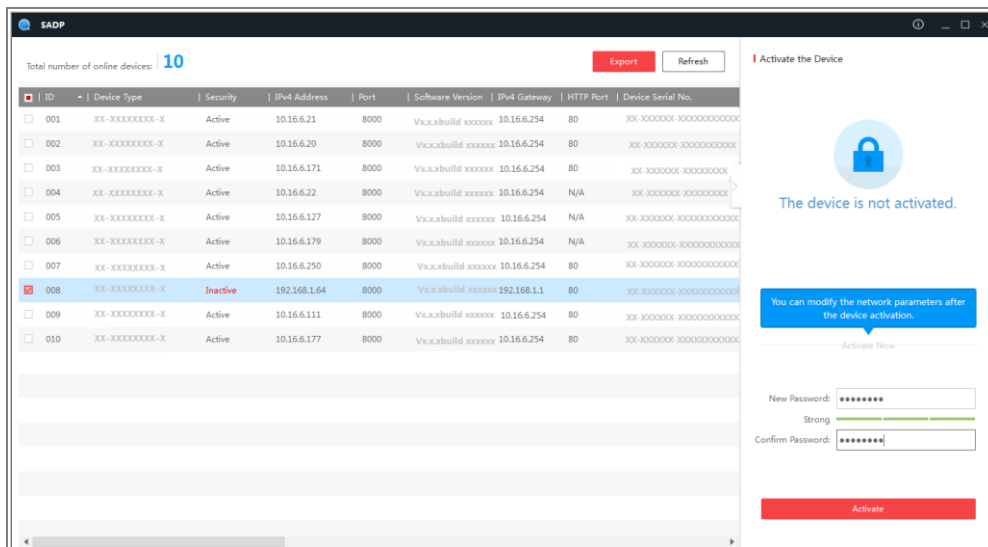

Figure A.1.1 Searching Online Devices

Note

Device can be searched and displayed in the list in 15 seconds after it went online; it will be removed from the list in 45 seconds after it went offline.

Step 3 Search online devices manually

Step 4 You can also click  to refresh the online device list manually. The newly searched devices will be added to the list.

Step 5  You can click  or  on each column heading to order the information; you can click  to expand the device table and hide the network parameter panel on the right side, or click  to show the network parameter panel.

● Modify network parameters

Step 6 Select the device to be modified in the device list and the network parameters of the device will be displayed in the **Modify Network Parameters** panel on the right side.

Step 7 Edit the modifiable network parameters, e.g. IP address and port number.

Step 8 Enter the password of the admin account of the device in the **Admin Password** field and click  to save the changes.

Caution

STRONG PASSWORD RECOMMENDED

- We highly recommend you create a strong password of your own choosing (using a minimum of 8 characters, including at least three of the following categories: upper case letters, lower case letters, numbers, and special characters) in order to increase the security of your product. And we recommend you reset your password regularly, especially in the high security system, resetting the password monthly or weekly can better protect your product.
 - Proper configuration of all passwords and other security settings is the responsibility of the installer and/or end-user.
